The information in this document is subject to change without notice. The statements, configurations, technical data, and recommendations in this document are believed to be accurate and reliable, but are presented without express or implied warranty. Users must take full responsibility for their applications of any products specified in this document. The information in this document is proprietary to Nortel Networks.

The process of transmitting data and call messaging between the CallPilot server and the switch or system is proprietary to Nortel Networks. Any other use of the data and the transmission process is a violation of the user license unless specifically authorized in writing by Nortel Networks prior to such use. Violations of the license by alternative usage of any portion of this process or the related hardware constitutes grounds for an immediate termination of the license and Nortel Networks reserves the right to seek all allowable remedies for such breach.

Trademarks

*Nortel Networks, the Nortel Networks logo, the Globemark, and Unified Networks, BNR, CallPilot, DMS, DMS-100, DMS-250, DMS-MTX, DMS-SCP, DPN, Dualmode, Helmsman, IVR, MAP, Meridian, Meridian 1, Meridian Link, Meridian Mail, Norstar, SL-1, SL-100, Succession, Supernode, Symposium, Telesis, and Unity are trademarks of Nortel Networks.

3COM is a trademark of 3Com Corporation.

ADOBE is a trademark of Adobe Systems Incorporated.

ATLAS is a trademark of Quantum Corporation.

BLACKBERRY is a trademark of Research in Motion Limited.

CRYSTAL REPORTS is a trademark of Seagate Software Inc.

EUDORA and QUALCOMM are trademarks of Qualcomm, Inc.

ETRUST and INOCULATEIT are trademarks of Computer Associates Think Inc.

DIRECTX, EXCHANGE.NET, FRONTPAGE, INTERNET EXPLORER, LINKEXCHANGE, MICROSOFT, MICROSOFT EXCHANGE SERVER, MS-DOS, NETMEETING, OUTLOOK, POWERPOINT, VISUAL STUDIO, WINDOWS, WINDOWS MEDIA, WINDOWS NT, and WINDOWS SERVER are trademarks of Microsoft Corporation.

GROUPWISE and NOVELL are trademarks of Novell Inc.

INTEL is a trademark of Intel Corporation.

LOGITECH is a trademark of Logitech, Inc.

MCAFEE and NETSHIELD are trademarks of McAfee Associates, Inc.

MYLEX is a trademark of Mylex Corporation.

NETSCAPE COMMUNICATOR is a trademark of Netscape Communications Corporation.

NOTES is a trademark of Lotus Development Corporation.

NORTON ANTIVIRUS and PCANYWHERE are trademarks of Symantec Corporation.

QUICKTIME is a trademark of Apple Computer, Inc.

RADISYS is a trademark of Radisys Corporation.

ROLM is a trademark of Siemens ROLM Communications Inc.

SLR4, SLR5, and TANDBERG are trademarks of Tandberg Data ASA.

SONY is a trademark of Sony Corporation.

SYBASE is a trademark of Sybase, Inc.

TEAC is a trademark of TEAC Corporation.

US ROBOTICS, the US ROBOTICS logo, and SPORTSTER are trademarks of US Robotics.

WINZIP is a trademark of Nico Mark Computing, Inc.

XEON is a trademark of Intel, Inc.

All other trademarks and registered trademarks are the property of their respective owners.

Publication history

October 2006	CallPilot 4.0, Standard 1.09 of the <i>CallPilot Installation and Configuration Task List</i> is issued for general release.
August 2006	CallPilot 4.0, Standard 1.08 of the <i>CallPilot Installation and Configuration Task List</i> is issued for the Service Assist program.
May 2006	Standard 1.07 of <i>CallPilot Installation and Configuration Task List</i> is issued for general release.
October 2005	Standard 1.06 of <i>CallPilot Installation and Configuration Task List</i> is issued for general release.
October 2005	Standard 1.05 of <i>CallPilot Installation and Configuration Task List</i> is issued for general release.
October 2005	Standard 1.04 of <i>CallPilot Installation and Configuration Task List</i> is issued for general release.
September 2005	Standard 1.03. of <i>CallPilot Installation and Configuration Task List</i> is issued for general release.
July 2005	Standard 1.01 of <i>CallPilot Installation and Configuration Task List</i> is issued for general release.

- July 2005** Standard 1.0 of *CallPilot Installation and Configuration Task List* is issued for general release.
- November 2004** CallPilot 3.0, Standard 1.0; *CallPilot Installation and Configuration, Installation and Configuration Task List*; title of book changed; revisions for change of operating system from Windows NT to Windows 2003; modifications to the procedures for restarting, shutting down, and starting up the CallPilot server; reorganized to provide overview task lists for installing, configuring, administering and maintaining the CallPilot system and Desktop Messaging software; now contains information that appeared formerly in both the *Part 1: Installation and Maintenance Overview* and the *Installation and Configuration Planner* which has been discontinued.
- April 2004** Release 2.5, Standard 2.0; MCS 5100 information added to checklists and worksheets
- October 2003** Release 2.5, Standard 1.0 of *CallPilot Installation and Configuration, Part 1: Installation and Maintenance Overview*; overview procedures modified (addition of Intel board install step and single point grounding info); EMC warning for the 1002rp server in the Site inspection checklist and customer-supplied items checklist; settings for the DSE and SL-100*/DMS-100* on worksheet
- October 2002** Standard 1.0 of *CallPilot Installation and Configuration, Part 1: Installation and Maintenance Overview* is released for CallPilot 2.0 general availability.

November 2000

Standard 2.0 of *CallPilot Installation and Configuration, Part 1: Installation Flowchart and Worksheets* is released for CallPilot 1.07.

May 2000

Standard 1.0 of *CallPilot Installation and Configuration, Part 1: Installation Flowchart and Worksheets* is released for CallPilot 1.07.

Chapter 1

How to get Help

This section explains how to get help for Nortel products and services.

Getting Help from the Nortel Web site

The best way to get technical support for Nortel products is from the Nortel Technical Support Web site:

<http://www.nortel.com/support>

This site provides quick access to software, documentation, bulletins, and tools to address issues with Nortel products. More specifically, the site enables you to:

- download software, documentation, and product bulletins
- search the Technical Support Web site and the Nortel Knowledge Base for answers to technical issues
- sign up for automatic notification of new software and documentation for Nortel equipment
- open and manage technical support cases

Getting Help over the phone from a Nortel Solutions Center

If you don't find the information you require on the Nortel Technical Support Web site, and have a Nortel support contract, you can also get help over the phone from a Nortel Solutions Center.

In North America, call 1-800-4NORTEL (1-800-466-7835).

Outside North America, go to the following Web site to obtain the phone number for your region:

<http://www.nortel.com/callus>

Getting Help from a specialist by using an Express Routing Code

To access some Nortel Technical Solutions Centers, you can use an Express Routing Code (ERC) to quickly route your call to a specialist in your Nortel product or service. To locate the ERC for your product or service, go to:

<http://www.nortel.com/erc>

Getting Help through a Nortel distributor or reseller

If you purchased a service contract for your Nortel product from a distributor or authorized reseller, contact the technical support staff for that distributor or reseller.

Chapter 2

CallPilot installation and configuration

In this chapter

Where to start	16
Related information	18

Where to start

Using the *Installation and Configuration Task List*

The *CallPilot Installation and Configuration Task List* provides an overview of installing CallPilot* system hardware and software.

- The primary purpose of the task list guide is to provide a road map for installing a new system.
- The task list guide also describes additional system tasks that might be performed during the initial installation of the system or after a system is installed.

Note: General references to hardware installation, configuration, and maintenance guides that use a model number or name in the title use the following convention:

- *<server_model> Hardware Installation*
(for example, *1002rp Hardware Installation*)
- *<server_model> Server Maintenance and Diagnostics*
(for example, *1002rp Server Maintenance and Diagnostics*)
- *<switch_model> and CallPilot Server Configuration*
(for example, *Meridian 1* and CallPilot Server Configuration*)

Note: To comply with the EU (European Union) RoHS directive, some of the part numbers now contain an E5 or E6 suffix. For example, part number NTRH2014 is now NTRH2014E6. The part numbers in this guide do not contain the suffix.

Installing a new system

For a new CallPilot installation, start at Chapter 3, “Installing a new CallPilot server.”

The checklists and worksheets required for the installation are in Appendix A, “Installation preparation checklists,” and Appendix B, “Configuration worksheets.”

Additional system tasks during or after installation

Additional system tasks include migrating data, expanding CallPilot features, and installing additional software components, such as the Application Builder and Desktop Messaging software.

Note: Chapter 9, “Starting up and shutting down the CallPilot server”, appears in the guide for reference during the initial installation. These tasks are also used in maintenance operations where the server must be shut down, restarted, or powered up.

Related information

CallPilot Fundamentals Guide

For more information on the following topics, see the *CallPilot Fundamentals Guide*:

- safety guidelines
- skills required
- symbols and conventions
- obtaining CallPilot technical documents
- accessing CallPilot online Help

CallPilot guides

CallPilot installation, configuration, administration, and maintenance guides are stored on the CD-ROM supplied with your system. For a list of CallPilot documentation, see the document map on page 8.

Online Help for CallPilot Manager and My CallPilot is available after installation and also provides online access to the guides.

Contacting technical support

Contact your channel partners to get help with troubleshooting your system.

Chapter 3

Installing a new CallPilot server

In this chapter

Overview of installation tasks	20
Preparing to install the CallPilot server	22
Installing the CallPilot server	25
Connecting the switch to the CallPilot server	27
Configuring the switch and CallPilot server	28
Testing CallPilot connectivity, services, and channels	31
Other administrative tasks	33
Desktop Messaging and My CallPilot installation tasks	35

Overview of installation tasks

The installation checklists in this chapter describe installing a new CallPilot server. The tasks are presented in the order in which they are to be completed.

CAUTION

Risk of software malfunction

Do not install software that is not provided with CallPilot. Software that is not approved by Nortel is not supported and can cause CallPilot to malfunction.

For information on non-CallPilot software supported by Nortel, refer to the *CallPilot Distributor Technical Reference* (DTR).

ATTENTION

Meridian 1 and Succession* 1000 only:

For important considerations about using the ELAN Subnet in your network, see the section on the ELAN Subnet for Meridian 1 and Succession 1000, in the *CallPilot Planning and Engineering Guide*.

ATTENTION

This is not a system recovery procedure. To perform a system recovery, see Chapter 11, “Recovering from a system failure.”

Before you begin

Before installing CallPilot hardware and software, become familiar with the following information which you will need during installation:

- Appendix A, “Installation preparation checklists.”
- Appendix B, “Configuration worksheets.”
- CallPilot system information, such as safety guidelines, described in the *CallPilot Fundamentals Guide*
- installation background information described in the *CallPilot Planning and Engineering Guide*, such as requirements for using the Embedded LAN (Meridian 1 and Succession 1000 only)
- a high-level diagram of how CallPilot fits into your network in the server description section in the *CallPilot <server_model> Server Hardware Installation* guide for your server (for example, the *CallPilot 201i Server Hardware Installation Guide*)
- an overview of switch programming and call routing in the *<switch_model> and CallPilot Server Configuration* guide for your switch and server (for example, the *Meridian 1 and CallPilot Server Configuration Guide*)

Note: For information and procedures on installing Desktop Messaging and My CallPilot software, see the *Desktop Messaging Installation Guide*, and *Desktop Messaging Administration and Maintenance Guide*.

Preparing to install the CallPilot server

Step	Description	Time required	Check
1	<p>Verify that the customer site is clean, properly laid out, and equipped.</p> <p>Complete the “Site inspection checklist” on page 100.</p>	5 minutes, if the site meets all of the requirements	<input type="checkbox"/>
2	<p>Ensure that you have the information and tools required to install the hardware:</p> <ul style="list-style-type: none"> ■ Obtain the necessary network configuration information from the customer’s network administrator. ■ Gather the necessary equipment, tools, and materials and complete the checklists: <ul style="list-style-type: none"> ■ “Required tools and materials” on page 104 ■ “Customer-supplied items checklist” on page 106 	10 minutes, if you have all of the items you need	<input type="checkbox"/>

Step	Description	Time required	Check
3	<p>Unpack the server and supplied equipment, software, and documentation.</p> <p>Verify the items received against the Nortel packing list, and ensure that the correct equipment arrived. Ensure also that the serial number and keycode match and that all hardware is in good condition.</p> <p>Complete the following checklists to ensure that you have all components ordered:</p> <ul style="list-style-type: none"> ■ “CallPilot server hardware checklist” on page 109 ■ “CallPilot software media and documentation checklist” on page 115 	30 minutes	<input type="checkbox"/>
4	<p>Inspect the server. Report any damage or missing components to Nortel.</p>	10–30 minutes (based on your server model)	<input type="checkbox"/>
5	<p>For tower or rackmount servers, review the slot and IRQ assignment information provided in the <i>CallPilot <server_model> Server Hardware Installation</i> guide for your server.</p> <p>You need slot assignment information later in the installation. You may need the IRQ information for troubleshooting if you experience problems with the server.</p>	10 minutes	<input type="checkbox"/>

Step	Description	Time required	Check
6	Review the “Network connectivity” section in the <i>CallPilot <server_model> Server Hardware Installation</i> guide for your server. This section provides an overview of how the CallPilot server is connected to the customer network.	5 minutes	<input type="checkbox"/>
7	If not already completed, fill out the configuration worksheets in Appendix B, “Configuration worksheets.” <ul style="list-style-type: none"><li data-bbox="197 587 650 651">■ the “Switch or system configuration worksheet” on page 121<li data-bbox="197 667 639 730">■ the CallPilot server “Configuration Wizard worksheet” on page 127	20 minutes, if you have all of the information you need	<input type="checkbox"/>

Installing the CallPilot server

For instructions on installing the CallPilot server, refer to the *CallPilot <server_model> Server Hardware Installation* guide for your server.

Step	Description	Time required	Check
1	If your server is a rackmount server, install the power supply modules.	2 minutes	<input type="checkbox"/>
2	<p>If the 19-inch rack is not already installed, install it now. For instructions, refer to the rack documentation.</p> <p>ATTENTION If applicable, ensure that the rack meets seismic bracing requirements. For more information, refer to the documentation for your switch or system.</p>	Based on rack, location, and connections: 1 to 4.5 hours	<input type="checkbox"/>
3	Place the server hardware and peripheral devices in the location chosen for the server.	5 minutes, if you unpacked the items in the chosen location	<input type="checkbox"/>

Step	Description	Time required	Check
4	<p data-bbox="188 229 665 256">Connect peripheral devices to the server.</p> <p data-bbox="188 272 661 336">Peripheral devices include the following items, based on your server platform:</p> <ul style="list-style-type: none"> <li data-bbox="197 357 628 384">■ external modem for remote access <li data-bbox="197 400 714 496">■ ELAN switch (layer 2) or hub (Meridian 1 or Succession Communication Server for Enterprise 1000 only) <li data-bbox="197 517 701 580">■ Nortel server subnet (NS; also known as CLAN) switch or hub (optional) <p data-bbox="227 601 717 767">Note: To reduce the risk of infection from this network, do not connect CallPilot to the optional Nortel server subnet before antivirus programs and Nortel security updates are installed.</p> <ul style="list-style-type: none"> <li data-bbox="197 794 654 858">■ external tape and CD/DVD-ROM or drives <li data-bbox="197 874 583 901">■ monitor, keyboard, and mouse <li data-bbox="197 917 692 981">■ software feature key adapter (tower and rackmount platforms only) 	30 minutes	<input type="checkbox"/>
5	Power up the server.	Based on your server model	<input type="checkbox"/>

Connecting the switch to the CallPilot server

For instructions on connecting and configuring the server and switch, refer to the *<switch_model> and CallPilot Server Configuration* guide for your switch and server.

Step	Description	Time required	Check
1	For tower and rackmount platforms only: install the connectivity hardware for connecting the CallPilot server to the switch. <ul style="list-style-type: none">■ For Meridian 1 and Succession 1000, install the MGate card in the switch.■ For T1/SMDI switches, install T1 and SMDI devices (such as T1 line side cards and an SMDI IOC shelf).	15 minutes	<input type="checkbox"/>
2	Connect the CallPilot server to the switch as described in the <i><switch_model> and CallPilot Server Configuration</i> guide for your switch and server.	15 minutes	<input type="checkbox"/>

Configuring the switch and CallPilot server

Step	Description	Time required	Check
1	<p>Configure the switch.</p> <p>For switch configuration information, refer to the “Switch or system configuration worksheet” on page 121 provided in the Appendix B, “Configuration worksheets.”</p> <p>For instructions, refer to configuring the switch or system in the <i><switch_model> and CallPilot Server Configuration</i> guide for your switch and server.</p>	30 minutes	<input type="checkbox"/>

Step	Description	Time required	Check
2	<p>Logon to the CallPilot Server. The setup wizard will automatically launch and guide you through a number of setup steps prior to configuring your system. Use CallPilot Manager to logon to the server. Run the Configuration Wizard to configure the CallPilot server and change the operating system passwords.</p> <p>For server configuration information, refer to the “Configuration Wizard worksheet” on page 127 provided in the Appendix B, “Configuration worksheets.”</p> <p>For logon and configuration instructions, refer to:</p> <ul style="list-style-type: none"> ■ configuring CallPilot server software in the <i><switch_model> and CallPilot Server Configuration</i> guide for your switch and server ■ online Help for the Configuration Wizard 	20 minutes, plus up to 1 hour to apply the changes	<input type="checkbox"/>
3	<p>Restart the server and ensure that it can start CallPilot.</p> <p>For instructions, see “Restarting the server” on page 69.</p>	Based on your server model; at least 10 minutes	<input type="checkbox"/>

Step	Description	Time required	Check
4	<p>Change the CallPilotDist password for pcAnywhere (note: pcAnywhere is not used with the 201i).</p> <p>Note: Record the new password on the Configuration Wizard worksheet, “pcAnywhere password,” on page 129.</p> <p>For information on changing the pcAnywhere password, see the <i><switch_model> and CallPilot Server Configuration</i> guide for your switch and server.</p>	5 minutes	<input type="checkbox"/>

Testing CallPilot connectivity, services, and channels

For instructions, refer to “Testing the CallPilot installation” in the *<switch_model> and CallPilot Server Configuration* guide for your switch and server.

Step	Description	Approximate time required	Check
1	Check CallPilot system ready indicators to see if CallPilot is ready to accept calls.	10 minutes	<input type="checkbox"/>
2	Test the connection to the ELAN Subnet, if applicable.	1 minute, if the ping is successful	<input type="checkbox"/>
3	Test the connection to the CLAN switch or hub.	1 minute, if the ping is successful	<input type="checkbox"/>
4	Verify that CallPilot answers when you dial the Voice Messaging DN.	5–10 minutes, if the test is successful	<input type="checkbox"/>
5	Verify network connectivity to the CallPilot server by using a web browser to log on to the CallPilot server.	5 minutes	<input type="checkbox"/>
6	Verify that you can leave a message. Note: This task includes the first-time configuration of a Voice Messaging DN and test mailbox.	25 minutes	<input type="checkbox"/>
7	Verify that you can retrieve a message.	2 minutes	<input type="checkbox"/>

Step	Description	Approximate time required	Check
8	Verify that each call channel and multimedia channel is functioning correctly.	2 hours	<input type="checkbox"/>

Other administrative tasks

Step	Description	Time required	Check
1	<p>Perform a full system backup of the CallPilot system.</p> <p>For instructions on performing the backup, refer to “Backing up and restoring CallPilot information” in the <i>CallPilot Administrator’s Guide</i> (555-7101-301) and CallPilot online Help.</p> <p>ATTENTION</p> <p>Nortel recommends that the backup also be stored in a safe location off-site.</p>	Based on server model; up to 3 hours	<input type="checkbox"/>
2	<p>For most CallPilot customers: Verify web security and install CallPilot Manager and Reporter on a stand-alone web server.</p> <p>When you install CallPilot Manager on a stand-alone web server, you can choose the option of installing CallPilot Reporter.</p> <p>Note: Ensure that the web server meets requirements. Nortel recommends an external security audit.</p> <p>For instructions, refer to “Installing CallPilot administrative software on a stand-alone web server” in the <i>CallPilot Software Administration and Maintenance</i> guide.</p>	10 minutes, if the web server meets the requirements for CallPilot Manager	<input type="checkbox"/>

Step	Description	Time required	Check
3	Install pcAnywhere on the stand-alone web server and a remote PC, and configure remote administrations. Note: Nortel requires pcAnywhere (supplied by the customer) for remote support.		
4	If purchased by the customer, install either or both: <ul style="list-style-type: none"><li data-bbox="197 523 680 587">■ Desktop Messaging on users' personal computers.<li data-bbox="197 603 680 667">■ My CallPilot on the CallPilot server or stand-alone web server. For instructions, see "Desktop Messaging and My CallPilot installation tasks," on page 35.		

Desktop Messaging and My CallPilot installation tasks

Task	Reference
1 Review and understand <ul style="list-style-type: none">■ the installation process■ Desktop Messaging requirements■ My CallPilot requirements	<i>Desktop Messaging and My CallPilot Installation Guide</i>
2 Complete the Preinstallation checklist.	<i>Desktop Messaging and My CallPilot Installation Guide</i> , “Desktop Messaging and My CallPilot preinstallation checklist”
3 Configure the CallPilot server to support Desktop Messaging and My CallPilot.	The completed “Desktop Messaging and My CallPilot preinstallation checklist”
4 Install or upgrade the Desktop Messaging software on users’ personal computers.	<i>Desktop Messaging and My CallPilot Installation Guide</i> , “Installing Desktop Messaging”
5 Install the My CallPilot software.	<i>Desktop Messaging and My CallPilot Installation Guide</i> , “Installing My CallPilot”

Chapter 4

Upgrading CallPilot

Upgrading CallPilot software involves replacing the software with a higher numbered release. The upgrade may also require a hardware change.

You can upgrade your CallPilot system using one of the following scenarios:

- upgrade from a previous release
- upgrade from a previous release after performing a feature expansion
- upgrade from a previous release at the same time as performing a feature expansion

You cannot downgrade to a previous version of CallPilot software.

Upgrade documentation

For instructions on upgrading your CallPilot server, refer to the *CallPilot Upgrade and Platform Migration Guide 555-7101-207*.

Chapter 5

Expanding CallPilot features and capacity

Perform a CallPilot software expansion when you want to

- add one or more keycoded features, such as AppBuilderFax or Networking
- increase the number of channels
- install additional languages

ATTENTION

Before you can perform a software expansion, you must acquire a new keycode from Nortel.

Feature expansion checklist

Step	Description	Time required	Check
1	<p>Compare the current CallPilot system configuration with the expansion keycode label, and ensure that</p> <ul style="list-style-type: none">■ the serial number matches■ the feature limits on the keycode label are equal to or greater than the limits on the CallPilot server <p>If the information on the keycode does not match the system configuration, the expansion may not succeed.</p>	5 minutes	<input type="checkbox"/>

Step	Description	Time required	Check
2	<p>Install additional hardware, if required.</p> <p>Note: Your system may require additional switch programming with the new hardware.</p> <p>If your CallPilot expansion includes an increase in system capacity, you may need to</p> <ul style="list-style-type: none"> ■ install and configure more MGate cards on the switch (tower and rackmount platforms only). For instructions, refer to the CallPilot configuration guide for your switch and server. ■ ensure the Meridian 1 or CS1000 system is properly load-balanced when you add MGate cards. For instructions, refer to the <i>Communication Server 1000M and Meridian 1 Planning and Engineering</i> guide (553-3021-120) and the <i>CallPilot Planning and Engineering</i> guide (555-7101-101). ■ perform a platform migration. For instructions, refer to the <i>CallPilot Upgrade and Platform Migration</i> guide. ■ install MPB96 boards (tower and rackmount platforms only) or MPC-8 cards (201i). 5	<p>Ensure that CallPilot can receive calls.</p> <p>For instructions, refer to “Verifying that CallPilot can receive calls” in the CallPilot configuration guide for your switch and server.</p>	5 minutes	<input type="checkbox"/>
6	<p>Ensure that all call and multimedia channels and features work as expected.</p> <p>This includes sending a fax, logging in to the mailbox using Speech Activated Messaging, using the phoneset to read e-mail, verifying that Desktop Messaging works, and using Reporter to generate the relevant reports.</p> <p>For instructions, refer to the section on testing the CallPilot software and channels in the CallPilot configuration guide for your switch and server.</p>	2 hours	<input type="checkbox"/>

Step	Description	Time required	Check
7	Create a backup of the CallPilot system. For instructions on performing the backup, refer to “Backing up and restoring CallPilot information” in the <i>CallPilot Administrator’s Guide</i> (555-7101-301).	Based on server model; up to 3 hours	<input type="checkbox"/>
	ATTENTION Nortel recommends that the backup be stored in a safe location off-site.		

Chapter 6

CallPilot server platform migration

Perform a platform migration to migrate data from one CallPilot server to another CallPilot server without losing existing CallPilot information. The migration path must be from an existing CallPilot platform to another equivalent or larger CallPilot platform. If your current server platform is not supported, you must perform a platform migration.

The unsupported platforms are:

- 200i
- 702t
- 1001rp

Platform Migration documentation

For instructions on migrating your CallPilot server, refer to the *CallPilot Upgrade and Platform Migration Guide (555-7101-207)*.

Chapter 7

Configuring and administering the CallPilot system

A CallPilot administrator can

- configure mailbox security
- add or customize restriction permission lists (RPLs)
- configure addressing information
- configure messaging service defaults
- configure CallPilot services (service DNs) and customize system prompts
- configure CallPilot networking
- customize and add mailbox classes to provide group access to installed CallPilot services
- add, delete, and customize mailboxes
- create and maintain shared distribution lists (SDL)

Logging on to the CallPilot server with CallPilot Manager

Introduction

You must use a web browser to log on to and administer the CallPilot server.

The logon process is completed in two stages:

1. Launch the web browser (on the CallPilot server, or on any PC that has network access to the CallPilot server).

The web browser on the CallPilot server is configured to automatically connect to the CallPilot Manager web server. If you launch the web browser on a PC, you must specify the URL for the CallPilot Manager web server.

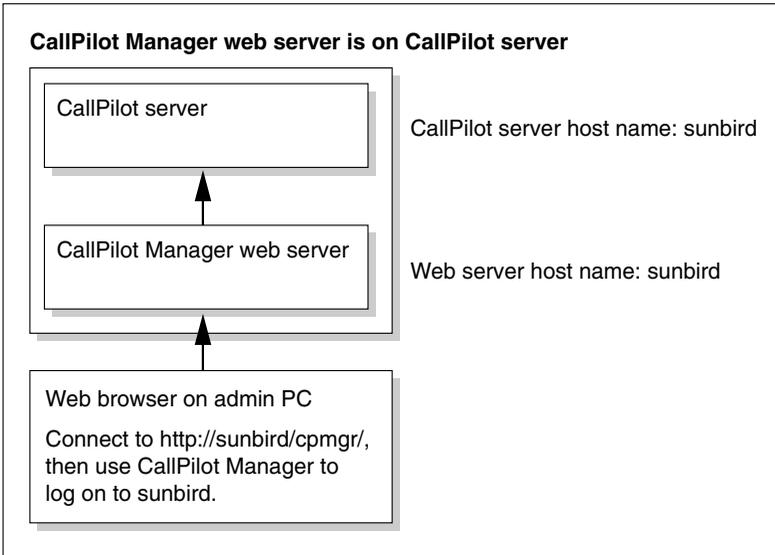

The URL syntax is `http://<web server host name or IP address>/cpmgr/`.

2. Log on to the CallPilot server with an administrator mailbox number and password.

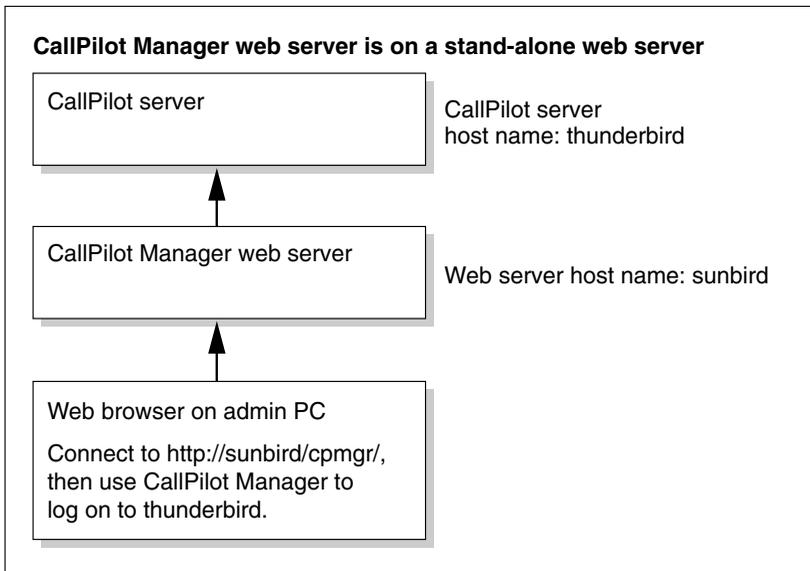

Relationship of the CallPilot Manager web server to the CallPilot server

The CallPilot Manager web server software can be installed on the CallPilot server, or on a stand-alone server. If the CallPilot Manager web server software is installed on a stand-alone server, you must know the CallPilot Manager server host name or IP address as well as the CallPilot server host name or IP address.

See the following diagrams:

G101752

G101753

To log on to the CallPilot server

- 1 Launch the web browser on your PC or on the CallPilot server.

IF you are launching the web browser on

THEN

the CallPilot server

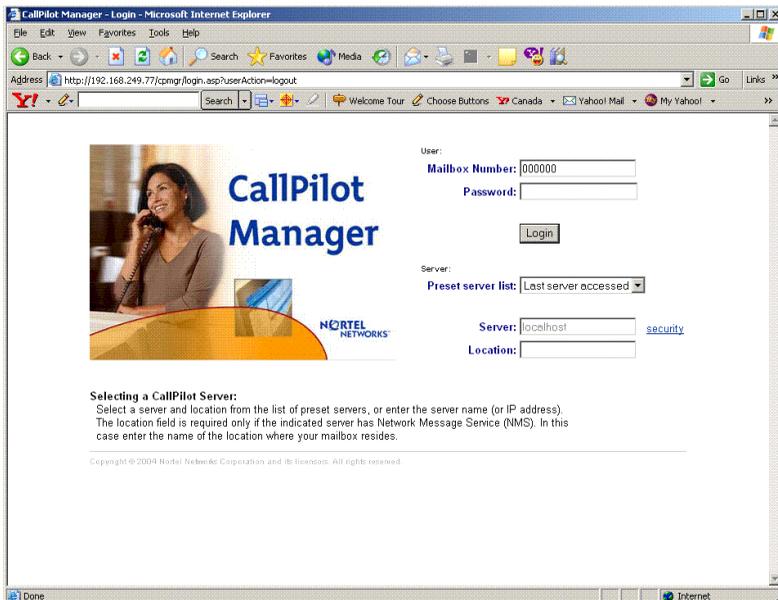

the CallPilot Manager - Login window appears automatically. Continue with step 2.

your PC

type the CallPilot Manager web server URL in the Address or Location box of your web browser, and then press Enter.

Example: `http://sunbird/cpmgr/`

When the connection is established, the CallPilot Manager - Login window appears. Continue with step 2.

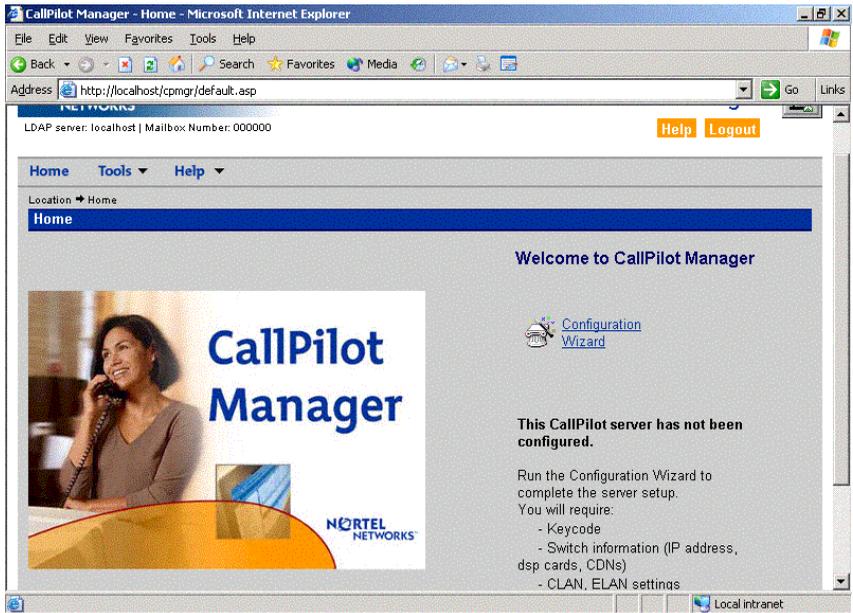

Note: The URL automatically appears as `http://<host name or IP address>/cpmgr/login.asp`. On the CallPilot server, the URL is `http://localhost/cpmgr/login.asp`.

- 2 Type the administrator mailbox number and password.
 - administrator mailbox number (default): **000000**
 - administrator mailbox password (default): **124578**.
- 3 Do one of the following:
 - Choose a server or location from the list of preconfigured servers or locations in the Preset server list box. Or, choose the Last Server Accessed item.
 - Type the CallPilot server host name or IP address in the Server box.
 - If the CallPilot server to which you are connecting has Network Message Service (NMS) installed, type the CallPilot server host name or IP address in the Server box, and then type the name of the switch location on which the administration mailbox resides in the Location box.

4 Click Login.

Result: The main CallPilot Manager window appears.

On-site configuration and administration tasks

5 If pcAnywhere was installed on a remote computer: Test remote administration of the CallPilot server.	<i>CallPilot Administrator’s Guide</i> , “Configuring remote administration of the CallPilot server”
6 If Reporter is installed: Test the Reporter link and set up monitoring and reports.	<ul style="list-style-type: none">■ <i>CallPilot Administrator’s Guide</i>, “Learning about CallPilot features”■ <i>CallPilot Reporter Guide</i>
7 If Application Builder is installed: Test the Application Builder link and ensure the availability of existing custom applications.	<ul style="list-style-type: none">■ <i>CallPilot Administrator’s Guide</i>, “Understanding CallPilot features and services”■ <i>CallPilot Application Builder Guide</i>

Chapter 9

Starting up and shutting down the CallPilot server

In this chapter

Stopping and starting channels	64
Restarting the server	69
Powering down the server	73
Powering up the server	78

Stopping and starting channels

Introduction

If you must take the CallPilot system out of service to perform software or hardware maintenance, you should first take all channels off duty.

If you take channels off duty, you must manually start them to put them back on duty. Channels that have been manually taken off duty do not automatically start when the CallPilot server is restarted or powered up.

Methods for taking channels off duty

There are two ways to take channels off duty:

- **Courtesy stop channels (preferred method).**
When you courtesy stop channels, CallPilot waits until the channels are no longer active before taking them off duty, instead of suddenly terminating active calls.
- **Stop channels.**
When you stop channels, you suddenly take them off duty and terminate all active calls.

ATTENTION

Nortel recommends that, if possible, you courtesy stop channels. Courtesy stop is available only at the individual channel level.

To courtesy stop CallPilot, use the following:

- **Multimedia Monitor:** to courtesy stop a range of multimedia (DSP) channels
- **Channel Monitor:** to courtesy stop a range of call (DS30X, also known as DS0) channels

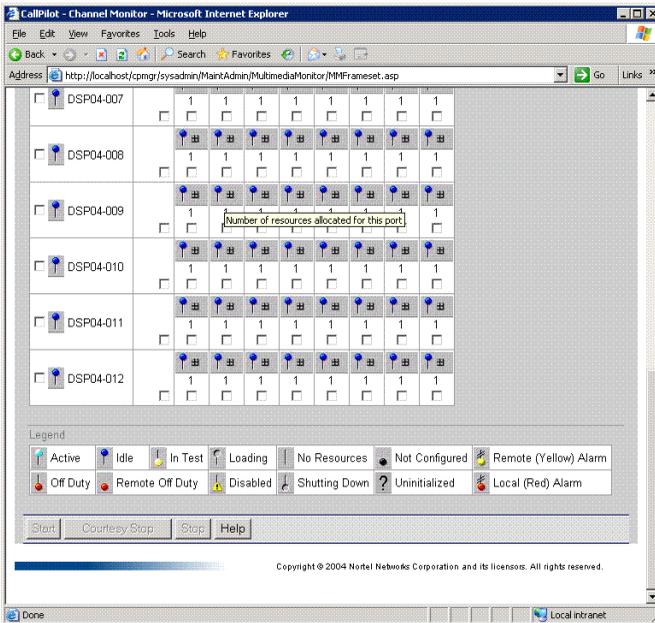

To stop or start channels

- 1 Log on to the CallPilot server with CallPilot Manager.

For instructions, see “Logging on to the CallPilot server with CallPilot Manager” on page 48.

- 2 In CallPilot Manager, click Maintenance → Multimedia Monitor.

Result: The Multimedia Monitor screen appears, showing the channels associated with each DSP.

ATTENTION

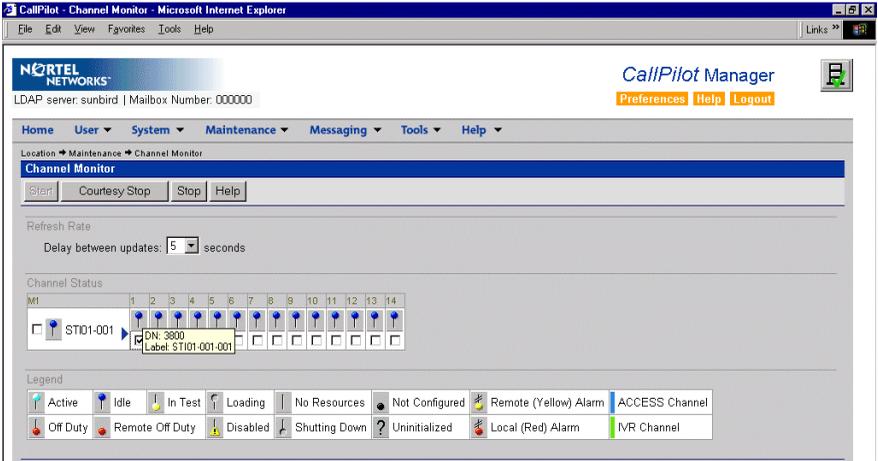

Courtesy stop is available only at the individual channel level. Therefore, to take the CallPilot system out of service, you must select each channel before clicking Courtesy Stop.

- 3 Select the check box for each DSP channel.
- 4 Do one of the following:

IF you want to	THEN
take the selected channels off duty	do the following: <ol style="list-style-type: none">a. Click Courtesy Stop. Note: If the Courtesy Stop button is not available, wait a few seconds for the screen to refresh. Result: You are asked to confirm the Courtesy Stop.b. Click OK. Result: The selected DSP channels change to off-duty status.
put the selected channels on duty	click Start. Result: The selected DSP channels change to on-duty status.

5 Click Maintenance → Channel Monitor.

Result: The Channel Monitor screen appears, showing the DS0 channels associated with each DS30X link.

ATTENTION

Courtesy stop is available only at the individual channel level. Therefore, to take the CallPilot system out of service, you must select each channel before clicking Courtesy Stop.

6 Select the check box for each DS0 channel.

7 Do one of the following:

IF you want to	THEN
take the selected channels off duty	do the following: <ul style="list-style-type: none">a. Click Courtesy Stop. Note: If the Courtesy Stop button is not available, wait a few seconds for the screen to refresh. Result: You are asked to confirm the Courtesy Stop.b. Click OK. Result: The selected DS0 channels change to off-duty status.c. After all channels are off duty, dial the CallPilot messaging DN to verify that all DSP and DS0 channels are off duty. Result: If all channels are off duty, you should receive a busy signal.
put the selected channels on duty	click Start. Result: The selected DS0 channels change to on-duty status.

Restarting the server

When to restart the server

You must restart the server as described in this section when you

- want to put software changes into effect
- are attempting to resolve operational problems
- have been instructed to do so

ATTENTION

Nortel recommends that, if the CallPilot server is in service, you courtesy stop all channels before you restart the server. When you courtesy stop the channels, CallPilot waits until the channels are no longer active before disabling them, instead of suddenly disconnecting active calls.

For instructions, see “Stopping and starting channels” on page 64.

ATTENTION

To minimize the amount of time you may be required to wait for channels to become inactive, consider one or both of the following options:

- Perform the server restart during off-hours only.
- Inform mailbox users and other administrators in advance when you will be restarting the server. This allows them to ensure that their Desktop Messaging, web messaging, and administration sessions are logged off.

Before you begin

If your server is a 201i server, and you are working at the server, connect a keyboard, monitor, and mouse to the server.

To restart the server

To restart the server, you must be working at the CallPilot server or be connected to the server through pcAnywhere.

- 1 Log on to the server with CallPilot Manager.

For instructions, see “Logging on to the CallPilot server with CallPilot Manager” on page 48.

- 2 Courtesy stop all call channels.

For instructions, see “Stopping and starting channels” on page 64.

- 3 Do one of the following:

IF you are	THEN
at the server	continue to next step.
at a PC connected remotely to the server	do the following: <ol style="list-style-type: none"> a. Use pcAnywhere to connect to and log on to the CallPilot server. b. Continue to next step.

- 4 Close all applications on the server.

Note: Applications that you are unable to close are automatically closed when you perform the operating system shutdown.

- 5 Press Ctrl+Alt+Delete.

Note: Shutting down the server software by pressing the Ctrl+Alt+Delete keys closes database files properly and reduces the time to restart the server.

Result: The Windows Security dialog box appears.

6 Set the following options in the Windows Security dialog box:

What do you want to do?	Choose Restart from the drop-down menu.
Select the option that best describes why you want to shut down the computer.	<p>Choose one of the following:</p> <ul style="list-style-type: none"> ■ Other (Planned) ■ Hardware Maintenance (Planned) ■ Hardware Installation (Planned) ■ Operating system: Reconfiguration (Planned) ■ Application: Maintenance (Planned) ■ Application: Installation (Planned) ■ Security Issue
Comment	If you selected "Other (Planned)" above, the OK button is unavailable. You must add a comment to enable the button.

7 Click OK.

Result: The server shuts down and then restarts.

Note: To interpret the diagnostic results that appear during the restart, refer to the *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server.

8 When the operating system logon prompt appears, press Ctrl+Alt+Delete to log on.

Result: You are prompted for an operating system user name and password.

9 Enter **Administrator** as the user name.

Note: You can choose to log on with a different user ID that has local administrative privileges.

- 10** Enter the password, and then click OK.

Result: The CallPilot server software starts.

ATTENTION _____
Wait 10 minutes before proceeding with step 11.

- 11** Log on to the server with CallPilot Manager.

For instructions, see “Logging on to the CallPilot server with CallPilot Manager” on page 48.

- 12** Start the DSP and DS0 channels on the Multimedia Monitor and Channel Monitor screens in CallPilot Manager.

For instructions, see “Stopping and starting channels” on page 64.

- 13** Ensure that CallPilot is ready to accept calls.

For instructions, refer to “Checking that CallPilot is ready to accept calls” in the <switch_model> and *CallPilot Server Configuration* guide for your switch and server.

Powering down the server

When to power down the server

Powering down a tower or rackmount server

Power down a tower or rackmount server when you want to:

- remove the server cover (for example, to access the interior components of the server)
- move the server to another location
- replace, remove, add, or upgrade server hardware that is not hot-swappable

Powering down a 201i server

Power down a 201i server when you need to replace, remove, add, or upgrade server hardware.

Note: The 201i server is powered automatically by the switch when it is locked into position on the switch.

CAUTION

Risk of equipment damage

When powering down the 201i, do not simply unseat the 201i. The 201i server obtains power from the shelf. Use the procedure “To power down the server,” on page 74.

ATTENTION

When power is lost at the SL-100, the CallPilot server must be shut down gracefully. After power is restored to the SL-100 and the T1 trunks are operational, restart the CallPilot server.

ATTENTION

Nortel recommends that, if CallPilot is in service, you courtesy stop all channels before you power down the server. When you courtesy stop the channels, CallPilot waits until the channels are no longer active before disabling them, instead of suddenly disconnecting active calls.

For instructions, see “Stopping and starting channels” on page 64.

ATTENTION

To minimize the amount of time you may be required to wait for channels to become inactive, consider one or both of the following options:

- Power down the server during off-hours only.
- Inform mailbox users and other administrators in advance when you will be powering down the server. This allows them to ensure that their Desktop Messaging, web messaging, and administration sessions are logged off.

Before you begin

If your server is a 201i server, and you are working at the server, connect a keyboard, monitor, and mouse to the server.

To power down the server

To power down the server, you must be working at the CallPilot server or be connected to the server through pcAnywhere.

- 1 Log on to the server with CallPilot Manager.

For instructions, see “Logging on to the CallPilot server with CallPilot Manager” on page 48.

- 2 Courtesy stop all call channels.

For instructions, see “Stopping and starting channels” on page 64.

- 3 Do one of the following:

IF you are	THEN
at the server	continue to next step.
at a PC connected remotely to the server	do the following: <ul style="list-style-type: none"> a. Use pcAnywhere to connect to and log on to the CallPilot server. b. Continue to next step.

- 4 Close all applications on the server.

Note: Applications that you are unable to close are automatically closed when you perform the operating system shutdown.

- 5 Press Ctrl+Alt+Delete.

Note: Shutting down the server software by pressing the Ctrl+Alt+Delete keys closes database files properly and reduces the time to restart the server

Result: The Windows Security dialog box appears.

6 Set the following options in the Windows Security dialog box:

What do you want to do?	Choose Shut down from the drop-down menu.
Select the option that best describes why you want to shut down the computer.	<p>Choose one of the following:</p> <ul style="list-style-type: none"> ■ Other (Planned) ■ Hardware Maintenance (Planned) ■ Hardware Installation (Planned) ■ Operating system: Reconfiguration (Planned) ■ Application: Maintenance (Planned) ■ Application: Installation (Planned) ■ Security Issue
Comment	If you selected “Other (Planned)” above, the OK button is unavailable. You must add a comment to enable the button.

7 Click OK.

Result: Server shutdown begins.

8 Wait for the following message to appear:

It is now safe to turn off your computer.

9 Do one of the following:

IF your server is

THEN

a tower or rackmount server

press the server power switch.

a 201i server

do the following:

- a.** Ensure that **DOWN** appears on the server hex display.

Note: The red LED power status indicator remains lit during the shutdown until the system is restarted.

CAUTION

Risk of equipment damage

Wait at least 2 minutes before removing the 201i to allow the drive to park the head.

- b.** Remove the server from the switch.

Powering up the server

If you had to power down the server to perform hardware maintenance, use the procedure described in this section to start the server.

To power up the server

- 1 Ensure that all peripheral devices are powered up.

Notes: If your server is a 201i server:

- Ensure that the switch shelf is also powered up.
- Ensure that a monitor is connected during the power-up sequence.
Note: The monitor is connected only when you need it. The 201i server is not intended to operate with a permanent monitor connection.

- 2 Do the following:

IF your server is	THEN
a tower or rackmount server	press the server power switch to start the server.
a 201i server	do the following: <ol style="list-style-type: none"> a. Push the server gently but firmly until it is flush with the switch backplane. Result: The server beeps for 3 seconds to indicate that power is being received. b. Close the lock latches to secure the server to the backplane. c. Ensure that the power status LED is lit.

3 Watch the start-up sequence as follows:

IF your server is	THEN
a tower or rackmount server	Observe the Power-On Self-Test (POST) and initialization messages on the monitor.
a 201i server	Watch the HEX display on the server. The HEX display shows T:01 through T:08, and then HOST.

4 The server boots into the operating system automatically, displaying a series of start-up screens and finally the operating system logo.

IF your server is	THEN
a tower or rackmount server	<p>The operating system start sequence begins. When the start sequence is completed, the operating system logon prompt appears on the monitor.</p> <p>If the logon prompt does not appear, see “Troubleshooting start-up problems” in the <i>CallPilot <server_model> Server Maintenance and Diagnostics</i> guide for your server.</p>

IF your server is	THEN
201i server	<p>The operating system start sequence begins, and communication with the switch occurs. The HEX display shows NT (for about 30 seconds), followed by OK. The operating system logon prompt appears on the monitor.</p> <p>Note: Before OK appears, one of the following messages may appear, but not for more than 1 second: <code>CDDLN</code>, <code>C:01</code>, or <code>C:02</code>. This is normal operation.</p> <p>If OK, or the logon prompt, or both do not appear, see “Troubleshooting start-up problems” in the <i>CallPilot <server_model> Server Maintenance and Diagnostics</i> guide for your server.</p>

Result: You are prompted for an operating system user name and password. If the system needs to be configured, a pop-up box for Maintenance Configuration Detection Information may appear to remind you.

- If the Maintenance Configuration Detection Information box appears, click OK unless you want a reminder to configure the server.

Note: On the 201i server, the HEX display changes from OK to CRI.

- Enter the user name (Administrator appears automatically in the field), and the password.

Note: You can choose to log on with a different user ID that has local administrative privileges.

- Click OK.

Result: The CallPilot server software starts.

ATTENTION Wait 10 minutes before proceeding with next step.

- Log on to the server with CallPilot Manager.

For instructions, see “Logging on to the CallPilot server with CallPilot Manager” on page 48.

- 9** Start the DSP and DS0 channels on the Multimedia Monitor and Channel Monitor windows in CallPilot Manager.

For instructions, see “Stopping and starting channels” on page 64.

- 10** Ensure that CallPilot is ready to accept calls.

For instructions, refer to “Checking that CallPilot is ready to accept calls” in the CallPilot configuration guide for your switch and server.

Chapter 10

Troubleshooting system problems

In this chapter

Overview	84
Using the Installation and Configuration guides	86
Using the CallPilot Administrator's Guide	91

Overview

This section provides an overview of the resources and tools you can use to determine the cause of system problems, and then resolve them.

Resources

Sources of documentation available for resolving system problems are the:

- *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server
- *CallPilot Administrator's Guide* (555-7101-301)
- *Troubleshooting Guide* (555-7101-501)

Tools

The following tools are provided with your CallPilot system and are briefly described in this chapter:

Type	Tools
Generic tools	<ul style="list-style-type: none"> ■ TCP/IP diagnostics
Operating system tools	<ul style="list-style-type: none"> ■ Diagnostics ■ Event Viewer
CallPilot tools	<ul style="list-style-type: none"> ■ LEDs and HEX display (201i servers only) ■ start-up sequence and diagnostic codes ■ System Event Log ■ installation and configuration log files

Type	Tools
CallPilot tools (continued)	<ul style="list-style-type: none"> ■ CallPilot System Configuration (to display switch and server settings) ■ Disk Usage window ■ Server Performance Monitor ■ Event Browser ■ Alarm Monitor ■ Maintenance window ■ Reporter ■ Channel Monitor ■ Multimedia Monitor
CallPilot system utilities	<ul style="list-style-type: none"> ■ Diagnostics utility ■ PEP Maintenance utility ■ System Monitor

Using the Installation and Configuration guides

Introduction

The Installation and Configuration guides provide instructions for using the resources provided by your CallPilot system.

LEDs

Server type	Description
tower or rackmount server	<p>The tower and rackmount servers provide LEDs on their front panel, on DVD/CD-ROM and tape drives, and on network interface cards. These LEDs indicate the operating status of the server or drive. On the network interface card, the LEDs also indicate if network activity is present.</p>
201i server	<p>The LEDs on the 201i server faceplate indicate when</p> <ul style="list-style-type: none"> ■ the server and MPC-8 cards are in use ■ the network interfaces, hard drive, and SCSI device are in use (201i server only) ■ it is safe to remove the server from the switch, or the MPC-8 card from the server <p>The HEX display on the 201i server faceplate displays messages that appear during start-up or normal server operation.</p> <p>For more information, refer to “LED and HEX displays” in the <i>CallPilot <server_model> Server Maintenance and Diagnostics</i> guide for your server.</p>

Start-up sequence and diagnostic codes

To help you determine if the server started successfully (or if it failed), watch the start-up sequence and the diagnostic codes that appear on the monitor. If your server is a 201i server, also observe the HEX display on the server faceplate.

If a hardware problem on the 703t server prevents the operating system from starting or a hardware problem is indicated by the status LED on the front panel, you can use the server System Event Log to investigate the problem. The System Event Log is a utility on the 703t server that reports hardware-related errors. You access the System Event Log by using the System Setup Utility.

For more information, refer to the *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server.

Log files

The installation event log tracks events associated with any installation, reinstallation, upgrade, or uninstallation operation. The log also tracks any fatal errors that interrupt these operations.

The Configuration Wizard log file is a record of the information entered through the CallPilot Configuration Wizard.

For more information, refer to “Viewing installation and configuration log files” in the *CallPilot Software Administration Guide*.

Operating system Diagnostics and Event Viewer

The operating system Diagnostics window allows you to view details concerning the system and network components.

The Event Viewer provides access to three logs (system, security, and application), which you can use to diagnose and debug system problems.

For more information, refer to “Performing operating system online diagnostics” in the *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server.

TCP/IP diagnostics

The following diagnostic tools help you to verify network connectivity and routing:

- ipconfig
- ping
- tracert
- arp
- nbtstat
- netstat

For more information, refer to “Invoking and interpreting TCP/IP diagnostics” in the *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server.

CallPilot Manager

Use the following screens in CallPilot Manager to monitor hardware status:

- Event Browser
The Event Browser lets you view events that have been recorded in the server log. The event description can help you determine the root cause of an event or problem.
- Alarm Monitor
An alarm is a warning that is generated by an event. The alarm notifies you of a potential or real problem. Use the Alarm Monitor in CallPilot Manager to investigate one or more raised alarms.
- Maintenance
Use the Maintenance screen to get status information for server hardware components, or to run diagnostics for a particular component.

- **Channel and Multimedia Monitors**

The Channel Monitor shows the status of DS0 channels, which are the connections that carry the call signals from the switch to CallPilot.

The Multimedia Monitor shows the status of multimedia channels, which are the DSP ports that process the calls. They are the voice, fax, and speech recognition channels.

For more information about using CallPilot Manager, refer to the following:

- “Logging on to the CallPilot server with CallPilot Manager” in the *CallPilot Software Administration Guide*
- the CallPilot Manager online Help
- “Using CallPilot Manager to monitor hardware status” in the *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server

CallPilot system utilities

The Diagnostics utility allows you to enable and disable CallPilot start-up diagnostics that run when the system starts. When diagnostics are disabled, this saves time during system maintenance operations where restarts or Call Processing services restarts are required.

The PEP Maintenance utility displays a list of all installed PEPs on the server and enables you to uninstall PEPs.

The Services Monitor can help you determine whether the CallPilot server is fully operational. It displays true states of the CallPilot services according to the operating system definition, including the states that are not available through the control panel.

The Session Trace tool provides detailed information about the activity in a user’s mailbox and the state of the message waiting indicator (MWI).

The System Monitor provides the following information:

- the status of all CallPilot services, multimedia channels, and call channels

- details about the CallPilot system, such as the features purchased, keycode, serial number, and IP addresses

For more information about these utilities, refer to the “Using CallPilot system utilities” chapter in the *CallPilot <server_model> Server Maintenance and Diagnostics* guide for your server.

Using the CallPilot Administrator's Guide

Introduction

The CallPilot Manager online Help and the *CallPilot Administrator's Guide* (555-7101-301) provide valuable information for monitoring system performance.

The CallPilot Manager online Help and the *CallPilot Administrator's Guide* (555-7101-301) both describe how to

- view and filter server events
- monitor the CallPilot server
- manage CallPilot channels
- troubleshoot CallPilot call service and system operation problems

Accessing the *CallPilot Administrator's Guide*

The *CallPilot Administrator's Guide* is provided in the following locations:

- on the CallPilot Documentation CD-ROM
- in the “Installation and Administration” area of CallPilot Manager
To access the “Installation and Administration” area, click the orange Help button in CallPilot Manager.

Viewing and filtering server events

If you want to reduce the number of events shown in the Event Browser at one time, you can screen the event log to view a specific number of the most recently filtered events. By default, the Event Browser displays the latest 100 critical events.

You can set the filter to display

- a specific number of latest events, or all events that are retrieved from the server
- events of a certain severity (critical, major, minor, information)
- a specific event code range, or all event codes
- a specific type of alarm status (alarm set, alarm cleared, or message)
- events that occurred during a specific date and time interval

Note: The filter combines the filter settings from each category.

Monitoring the CallPilot server

Monitoring activities include the following:

- viewing switch configuration and server settings

You may need this information when you communicate with product support personnel.

- monitoring disk space

The performance of your CallPilot system depends, to some degree, on the amount of available disk space. Without enough disk space, the server cannot perform adequately. In some circumstances, the server can stop functioning.

Nortel systems are engineered to provide adequate space to meet your data storage and system operation requirements. You must, however, monitor disk space occasionally to ensure that space does not become too limited.

- monitoring the database

The database stores user information, system configuration information, and various statistics that are collected by the system. You cannot monitor the database disk space directly. However, an informational alarm is generated if the database reaches 95 percent capacity. A major alarm is generated if the database reaches 98 percent or 100 percent capacity.

Possible reasons for database problems include the following:

- Operational measurement statistics are too detailed or stored for too long.
- The system is under-engineered.

If your estimated usage patterns change or if your number of users grow, you may need to purchase additional disk space. Contact your Nortel channel partner for details.

- monitoring server performance

The Performance Monitor lets you keep track of the day-to-day hardware and software operations of your system. The window includes information about processor usage, available memory, and available storage space. You may want to view server performance daily to ensure that the server is working properly. You may also want to view data if the performance of your server has deteriorated.

Managing CallPilot channels

Call channels carry digital voice, fax, and speech recognition data from the switch to the server. When the data reaches the server, the multimedia channels process the data according to the type of transmission.

You can monitor individual call channels through the Channel Monitor screen, and multimedia channels or MPC-8 cards through the Multimedia Monitor screen in CallPilot Manager.

As required, you can also remove the call and multimedia channels from service so that you can perform diagnostics, upgrades, or installations. When the maintenance or diagnostics are complete, restart the call and multimedia channels and put them back into service.

Troubleshooting call service problems

Call service problems may occur in the Remote Notification, Delivery to Telephone (DTT), and Delivery to Fax (DTF) services, if they have been put into service.

The types of problems that can occur when using Outcalling services include

- being unable to use the Outcalling service because channels are not available

This can occur if the channel allocation is not spread evenly, or channels are out of service or faulty.

- experiencing a high rate of failures because of incorrect configuration or because the retry limits are exceeded

DTT or DTF failures can occur because of the following conditions:

- busy
- no answer
- answered, but no DTMF confirmation was provided, or the call was terminated before delivery could take place

Remote Notification failures can occur because of the following:

- The users' Remote Notification target DNs are restricted.
- Pager setups may not be correctly configured for users.
- Retry limits were exceeded.

You can monitor these types of problems by using the Event Browser or Reporter.

Troubleshooting system operation problems

The following types of system operation problems can occur:

- Alarms are generated despite no apparent system problem.

If the system shows no apparent system problem but alarms are occurring, check if someone has recently run diagnostics on the system. A diagnostic test can generate an alarm as part of its test, even if the system is fine.

- Calls are not answered.

Possible causes include the following:

- CallPilot is improperly configured.
- The Service DN table is not configured correctly.
- Call flow from the switch is impaired due to an incorrect switch configuration.

- Calls are answered, but no prompts are heard.

Possible causes include the following:

- There is a possible error in the application that supports the requested service.
- There is a problem with the DS0 channel or the DS30X link.
- The system is not working after an IP address change.

If the IP address of a CallPilot server is changed while the system is up and running, the system will not work until you restart the switch.

- The monitor shows a blue screen.

If the monitor suddenly shows a blue screen with only white text on it, a system error has occurred. Record all the events that took place prior to the appearance of the blue screen. Then record any text that appears on the blue screen, and contact customer support for assistance.

Chapter 11

Recovering from a system failure

The operating system and CallPilot server software are preinstalled at the factory. However, if your CallPilot system experiences a hard drive failure or your system does not work properly, you may be instructed by your support representative to replace the hard drive, rebuild the system, or both.

CAUTION

Risk of software malfunction

- Nortel recommends that you open a support ticket with your technical support group before you proceed with a system rebuild.
- After the system recovery, do not install software that is not provided with CallPilot. Software that is not approved by Nortel is not supported and can cause CallPilot to malfunction.

More information

For more information, refer to the section on recovering a system in the *CallPilot Software Administration and Maintenance Guide*.

Appendix A

Installation preparation checklists

In this chapter

Site inspection checklist	100
Required tools and materials	104
Customer-supplied items checklist	106
CallPilot server hardware checklist	109
CallPilot hardware and documentation spares checklist	114
CallPilot software media and documentation checklist	115
Preinstalled software	117

Site inspection checklist

Before you perform the hardware installation, complete the following site inspection checklist:

Check	Description
<input type="checkbox"/>	<p>Ensure that a water fire retardant system is not present in the chosen location.</p> <p>If this system is activated, this could severely impact the ability of the CallPilot system to operate.</p>
<input type="checkbox"/>	<p>Ensure that there are no heat sources near the peripheral equipment.</p> <p>The CallPilot server environment must be properly cooled.</p>
<input type="checkbox"/>	<p>Ensure that the area is isolated from strong electromagnetic fields and electrical noise sources such as air conditioners, large fans, motors, radio or TV transmitters, or high-frequency security devices.</p>
<input type="checkbox"/>	<p>Ensure that the area is clean and clear of any debris.</p>
<input type="checkbox"/>	<p>If the CallPilot server is a rackmount server, install the 19-inch rack.</p> <p>For instructions, refer to the rack documentation.</p> <p>ATTENTION</p> <p>If applicable, ensure that the rack meets seismic bracing requirements. For more information, refer to the documentation for your switch or system.</p>

Check	Description
-------	-------------

- Ensure that there is adequate space for all equipment.
 - If your server is a tower or rackmount server, ensure that there is adequate space for access to the front, side, and rear panels of the server.
 - Ensure that there is adequate space for air flow around the peripheral equipment, for ventilation.

- Ensure that there is a desk, shelf, or table available for the monitor, keyboard, mouse, and modem.

- Ensure that an external analog phone line is available for the modem.

Note: The line should not be connected to the customer's switch. If the switch goes down, the CallPilot server cannot be supported from a remote location.

Check	Description
-------	-------------

- | | |
|---|--|
| □ | <p>Ensure that a single-point ground reference is available for all the power outlets serving the CallPilot server and its peripherals.</p> <p>Before the CallPilot server installation, a qualified electrician must implement the single-point ground reference requirement between the power outlets of the CallPilot server and the power outlets of the switch. Refer to the section on single-point grounding requirements in <i>CallPilot Fundamentals</i> for further details.</p> <p>Provide a sufficient number of properly grounded power outlets or power bars for all equipment. You need one outlet for each of the following items:</p> <ul style="list-style-type: none"> ■ server (if your server is a tower or rackmount platform) ■ web-enabled administration PC that has network connectivity to CallPilot, or monitor, or both ■ modem (remote maintenance modem) ■ external CD-ROM drive (if your server is a 201i server) ■ external tape drive (if your server is a 201i server, the drive is optional) ■ external SLR75 tape drive if your server is a 1005r ■ ELAN Subnet and Nortel server subnet switches or hubs <p>ATTENTION</p> <p>A Class A switch or hub must be located 10 m (33 ft) away from the 703t server to comply with EMC requirements.</p> <ul style="list-style-type: none"> ■ Symposium* Call Center Server (if installed) ■ customer-supplied network equipment (if required) ■ uninterruptible power supply (UPS) (if installed) <p>Note: Nortel strongly recommends that you use a UPS to maintain power to the server and ELAN/Nortel server subnet switch or hubs in the event of a power outage.</p> |
|---|--|

- | Check | Description |
|--------------------------|---|
| <input type="checkbox"/> | Ensure that jacks and cables are ready for all required connections. |
| <input type="checkbox"/> | Ensure that any changes that are necessary on the switch to make room for the 201i server or the MGate card (NTRB18CA) are performed before the installation date.
This includes <ul style="list-style-type: none">■ ensuring that two consecutive IPE card slots are available (for the 201i server)■ ensuring there are enough card slots for the MGate cards■ moving lines and trunks■ consolidating TNs |
| <input type="checkbox"/> | If it has not been done already, obtain the following information: <ul style="list-style-type: none">■ for the CallPilot server<ul style="list-style-type: none">— unique computer names— IP addresses— subnet masks (Nortel server subnet and ELAN Subnet)— default gateway (Nortel server subnet)■ direct inward dial (DID) numbers on the switch Record this information on the following worksheets, as required: <ul style="list-style-type: none">■ “Switch or system configuration worksheet” on page 121■ “Configuration Wizard worksheet” on page 127 |
| <input type="checkbox"/> | Ensure that the items that are listed on the “Customer-supplied items checklist” on page 106 are provided. |
-

Required tools and materials

Ensure that the tools and materials identified in the following checklist are available. You may need to use them to perform installation, upgrade, or maintenance tasks:

Check	Item
<input type="checkbox"/>	Antistatic ESD wrist strap (recommended)
<input type="checkbox"/>	Various sizes of Phillips cross-head and standard screwdrivers
	Note: If your server is a tower or rackmount server, magnetic screwdrivers are recommended to prevent you from losing the screws inside the server chassis.
	ATTENTION
	To prevent data loss, keep magnetic screwdrivers away from backup tapes, floppy disks, and hard drives.
<input type="checkbox"/>	A set of hex nut drivers
<input type="checkbox"/>	Side cutters
<input type="checkbox"/>	Jumper removal tool or needle-nosed pliers
<input type="checkbox"/>	Tweezers
<input type="checkbox"/>	Tape measure for determining cable lengths
<input type="checkbox"/>	A flashlight for examining the interior of a tower or rackmount server chassis
<input type="checkbox"/>	Pen for writing notes, cable lengths, and cable identifications
<input type="checkbox"/>	Cable tie wraps
<input type="checkbox"/>	Cable identification labels

Check Item

- Equipment log**
The equipment log is used to record the model and serial number of the system, all installed options, and other information.
 - Null modem serial cable (it can be useful for troubleshooting)**
 - If the CallPilot server is a 201i server, an external tape drive.**
The tape drive is required when performing backups or restoring data from backups if you are not backing up to a network drive.
 - If the CallPilot server is a 1005r, an SLR75 external tape drive**
The tape drive is required when performing backups or restoring data from backups if you are not backing up to a network drive.
 - If the CallPilot server is a 201i server, an external CD-ROM drive**
The external CD-ROM drive is required when installing CallPilot or operating system software.
 - For any server model, a monitor peripheral kit to access the CallPilot system for maintenance purposes**
 - A computer with a CD/DVD-ROM drive that is separate from the CallPilot server (such as a laptop computer)**
This is required for reading documentation on CD/DVD-ROM and for connecting to the CallPilot server network for troubleshooting.
-

Customer-supplied items checklist

Ensure that the customer has supplied the items identified in the following checklist:

Check	Item
<input type="checkbox"/>	Secure location for the CallPilot server and peripheral equipment Windows and doors should be kept locked and provide access only to authorized personnel.
<input type="checkbox"/>	External analog phone line for the modem The line should not be connected to the switch. If the switch goes down, the CallPilot server cannot be supported from a remote location.
<input type="checkbox"/>	Web-enabled administrative PC The web-enabled administrative PC should be in close proximity to the CallPilot server, and must have <ul style="list-style-type: none">■ network connectivity to the CallPilot server (it can be on the Nortel server subnet or ELAN Subnet)■ one of the following web browsers installed (for software versions, see the <i>CallPilot Planning and Engineering Guide</i>):<ul style="list-style-type: none">— Internet Explorer— Netscape Communicator■ a CD-ROM drive so that CallPilot documentation can be accessed from CD-ROM■ access to the Internet so that the installation technician can download software updates from Nortel, if required
<input type="checkbox"/>	TCP/IP-based ELAN Subnet that connects the switch and the server (Meridian 1 or Succession 1000 only)

Check Item

- A layer 2 switch or hub for the ELAN Subnet (or an appropriate alternative), power cord, and, if required, back-up power supply
The ELAN switch or hub is optional. You can use a cross-over network cable to make a direct point-to-point connection from the CallPilot server to the switch. If you want other devices to have connectivity to the ELAN Subnet, use a switch or hub.
ATTENTION
A Class A switch or hub must be located 10 m (33 ft) away from the 703t server to comply with EMC requirements.
- Ethernet connections ready at the Meridian 1 or Succession 1000 system (cables and Ethernet transceivers or MAUs)
- Cable for connecting the ELAN Subnet to the customer WAN (optional)
This allows you or Nortel technical support to connect to the ELAN Subnet from a remote location.
- TCP/IP-based Nortel server subnet that can connect desktop or web messaging users to the server, if the Desktop Messaging feature has been purchased
This includes any hardware or software to facilitate Nortel server subnet segmentation or multiple-LAN protocols.
- A hub for the Nortel server subnet or an appropriate alternative
ATTENTION
A Class A switch or hub must be located 10 m (33 ft) away from the 703t server to comply with EMC requirements.
- Jacks and a cable for connecting the CallPilot server to the Nortel server subnet (optional)

Check **Item**

- ❑ Web server PC, if
 - CallPilot Manager and CallPilot Reporter will be installed on a stand-alone server

CallPilot Manager is the web-based software that you use to administer the CallPilot server. CallPilot Manager must be installed on a stand-alone web server if you want to use CallPilot Reporter. You cannot install CallPilot Reporter on the CallPilot server.
 - My CallPilot will be used by mailbox owners

My CallPilot is a web-based portal that provides access to CallPilot messages and mailbox configuration over the Internet.

My CallPilot can be installed on the same web server as CallPilot Manager.
- For information about the web server PC requirements for CallPilot Manager and My CallPilot, refer to the following sections in the *CallPilot Software Administration* guide:
- “Installing CallPilot administrative software on a stand-alone web server”
 - “Installing Desktop Messaging and My CallPilot”
-

CallPilot server hardware checklist

The following checklist identifies the hardware that you need to put the CallPilot server into operation in your network. Use this checklist (as well as the packing list provided with the customer order) to ensure that you have all the components you need.

Check	Item
-------	------

Tower or rackmount server and peripheral devices

- Keycode printed on a label that lists the purchased features
- Tower or rackmount CallPilot server
 - The server contains the following items, which are already installed:
 - CD/DVD-ROM drive
 - hard drives
 - network interface cards
 - One or more MPB boards (MPB96)
- Keyboard and mouse
- SVGA 14-in. monitor
- Modem with cable and power cord (for remote access)
- Ethernet hubs, if purchased from Nortel

Check Item

201i server and peripheral devices

- Keycode printed on a label that lists the purchased features
- 201i server
- Multi I/O cable (NTRH0912)
- EMC kit (NTRH3503)

Note: The EMC kit is required for Option 11C Mini and Succession 1000 systems only.

- Backplane (tip and ring) cable (NTRH3501)

Note: This cable is required for Meridian 1 Option 51C–Option 81C systems only.

- One of the following groups of SCSI cables:

- For Meridian 1 Option 51C–Option 81C:

- NTRH1408
- NTRH1410
- NTRH3502

- For Option 11C:

- NTRH1407
- NTRH3502

- For Option 11C Mini or Succession 1000: NTRH3502
(two cables are required)

Note: An NTRH3502 cable is supplied with each external SCSI CD-ROM or tape drive.

- MPC-8 cards to provide the number of channels purchased for CallPilot

Check Item

SVGA 14-in. monitor

Keyboard and mouse

Note: If you are using a USB mouse, ensure that you also have a USB-to-PS/2 converter and a PS/2 extension cable (A0855616).

Modem with cables and power cord (for remote access)

Ethernet hubs, if purchased from Nortel

External CD-ROM drive with NTRH3502 SCSI and power cables

External tape drive with SCSI and power cables

Meridian 1 or Succession 1000 connectivity items—rackmount server only

MGate card(s) (NTRB18CA)

The following MGate cables, as required:

- Triple DS30XV connect cable (NTRH2014) (for connection to MPB96 boards only)

Note: For more details about the MGate card cabling requirements, refer to the *<switch_model> and CallPilot Server Configuration* guide for your switch and server.

SL-100, DMS-100 connectivity items—rackmount platforms only

Dialogic D/480JCT-2T1 board(s)

T1 cable(s)

T1 card(s)

Check Item

- SMDI link modem connection equipment (if the switch has an IOC shelf and is more than 15.2 m or 50 ft from the server)
 - Long-haul modems
(two modems)
 - Modem cable for connection to CallPilot
 - IOC cable

Note: A cable is also required to connect the two modems. Pinout information for this cable is provided in the <switch model> and *CallPilot Server Configuration* guide for your switch and server. This cable is created or supplied by the customer or installer.

Check Item

- SMDI link modem connection equipment (if the switch has an IOM and is more than 229 m or 750 ft from the server)
 - Long-haul modems
(2 modems)
 - Modem cable for connection to CallPilot
 - IOM cable
 - Smart connector

Note: A cable is also required to connect the two modems. Pinout information for this cable is provided in the *<switch_model> and CallPilot Server Configuration* guide for your switch and server. This cable is created or supplied by the customer or installer.

- SMDI Link Direct Connection equipment
 - DB-9 (F) to DB-25 (F) Null Modem cable
 - IOC cable
 - SMDI Link Direct Connection equipment
 - DB-9 (F) to DB-25 (M) Null Modem cable
 - IOM cable
 - Smart Connector
-

CallPilot hardware and documentation spares checklist

The following checklist identifies the hardware components that you should carry with you as spares when you visit a customer site. Ensure that you take the components that are relevant to the server model purchased by the customer.

Check	Item	Quantity
<input type="checkbox"/>	MPB96 board or MPB16-4 board	1
<input type="checkbox"/>	MPC-8 cards (for the 201i server)	4
<input type="checkbox"/>	201i server hard drive	1
<input type="checkbox"/>	703t server hard drive	1
<input type="checkbox"/>	1002rp server hard drive	1
<input type="checkbox"/>	1005r server hard drive	1
<input type="checkbox"/>	Network hub	1
<input type="checkbox"/>	Network cable	1
<input type="checkbox"/>	All CallPilot server software CD-ROMs For a complete list, see “CallPilot software media and documentation checklist” on page 115.	1 of each CD-ROM
<input type="checkbox"/>	CallPilot image DVD (1005r only)	1

CallPilot software media and documentation checklist

The software media and documentation checklist identifies the software media and documentation needed to put the CallPilot server into operation in your network. Use the checklist (and the packing list provided with your order) to ensure that you have all of the components you need.

Note: Store software media in a safe place. Use the software when instructed in the documentation. CallPilot server software is preinstalled at the factory, so you may not be asked to use some of these CD-ROMs unless you are performing a recovery, reinstallation or expansion.

Check	Item
-------	------

- | | |
|--------------------------|---|
| <input type="checkbox"/> | CallPilot Image (3 CD-ROMs)—contain an image of the CallPilot software. |
|--------------------------|---|

Note: CallPilot CD-ROM disk images are platform dependant. A different image of the operating system and CallPilot software is required for each platform (201i, 703t, 1002rp.).

Note: The 1005r CallPilot image is contained on 1 DVD.

- | | |
|--------------------------|---|
| <input type="checkbox"/> | CallPilot Service Update/PEP CD-ROM: <ul style="list-style-type: none">■ Service Updates and PEPs |
|--------------------------|---|

Check **Item**

- CallPilot Application CD — contains applications that can be reinstalled.
 - CallPilot server software
 - CallPilot Manager and Reporter
 - CallPilot Application Builder
 - pcAnywhere
 - Adobe Acrobat Reader
 - DirSync
 - Java2RunTimeEnv
 - CallPilot Desktop Client software
 - CallPilot My CallPilot web-based software (provides mailbox access for end users)
 - CallPilot language prompts on a set of 3 CD-ROMs.
 - Americas language prompts
 - EMEA language prompts
 - Asia-Pacific language prompts
 - CallPilot Documentation CD-ROM
 - The following printed CallPilot documentation:
 - CallPilot Distributor Technical Reference (DTR)*

Note: You can obtain other CallPilot documentation from the CallPilot Documentation CD/DVD-ROM, or from the Installation and Administration Help area in CallPilot Manager. See “Related information” on page 18 for more details about the available documents.
-

Preinstalled software

What is installed at the factory

The factory installs the operating system and CallPilot server software and third-party applications such as pcAnywhere prior to shipping the server. A disk image of this software is also shipped with the system. See “CallPilot software media and documentation checklist” on page 115).

For version numbers of the software applicable to your installation, see the *CallPilot Planning and Engineering Guide*.

The following software is installed at the factory before the server ships:

- the operating system and the components required by CallPilot
- web browser
- software for the switch-connectivity hardware
- CallPilot server software
- CallPilot Manager (web-based administration server software)
- RAID software (tower and rackmount servers only).
- SQL Anywhere database
- pcAnywhere
- Adobe Acrobat Reader (for online viewing of the CallPilot documentation)
- other equipment manufacturers (OEM) right-to-use (RTU) software certificates

Nortel utilizes OEM software license RTUs, and each RTU is licensed for each CallPilot application. The manufacturer provides a certificate and serial number with the RTU.

The OEM license and serial number must be kept with the CallPilot application for its entire service life. These RTU serial numbers are required for complete software reinstallation in the event of disk failure. If the server is replaced or decommissioned, you must return all OEM RTUs to Nortel with the server hardware.

Nortel recommends that you store all RTU certificates on-site in a secure, dry, accessible place for future access. You can store the RTU certificates in an envelope that is taped to the CallPilot server.

Cautions

CAUTION

Risk of system interruption or malfunction

Do not download and install any security patches from the Microsoft web site or antivirus software unless they have been approved for CallPilot by Nortel. Installation of unapproved security patches or antivirus software may result in incorrect operation of your CallPilot system.

To determine which patches and antivirus software have been approved by Nortel for CallPilot, refer to the latest issue of the *CallPilot Distributor Technical Reference* (DTR).

CAUTION

Risk of reduced system performance

Do not activate screen savers on the CallPilot server. Screen savers consume significant CPU resources and, therefore, impact CallPilot response time.

Note: CallPilot operation is not affected when you power off the monitor.

Appendix B

Configuration worksheets

In this chapter

Overview	120
Switch or system configuration worksheet	121
Configuration Wizard worksheet	127

ATTENTION

The configuration worksheets should be photocopied or removed and kept in a secure place. Passwords recorded in the worksheets can be a security risk unless stored safely.

Overview

Introduction

You need the information that you collect in this section when you

- configure the switch or system
- run the Configuration Wizard on the CallPilot server

Note: Nortel recommends that you configure the switch or system and prepare the cabling ahead of the CallPilot server installation date.

Where to get the information

Obtain the information from the switch or system administrator and network administrator.

When to use the worksheets

Use the configuration worksheets in these situations:

- when you install the server
- each time configuration changes are required as part of an upgrade, migration, or reinstallation

Switch or system configuration worksheet

Complete this worksheet as preparation for configuring the switch or system. For instructions on how to configure the switch or system, refer to the <switch_model> and *CallPilot Server Configuration* guide for your switch and server.

switch or system type

<input type="checkbox"/> Meridian 1 <input type="checkbox"/> Option 51C, 61C, 81, 81C <input type="checkbox"/> Option 11 or Option 11C Mini	See “Meridian 1 or Succession 1000 information” on page 122
<input type="checkbox"/> Succession 1000	
<input type="checkbox"/> SL-100, DMS-100	See “SL-100/DMS-100 switch information” on page 125

Meridian 1 or Succession 1000 information

Complete this section only if your CallPilot server is connected to a Meridian 1 or Succession 1000 system.

Customer number:	_____
Ethernet information (Overlay 117)	
Primary IP address (ELAN):	_____ . _____ . _____ . _____
Secondary IP address (ELAN):	_____ . _____ . _____ . _____
Note: A secondary IP address for the ELAN is required only for large Meridian 1 systems (such as Option 51C).	
Subnet mask (ELAN):	_____ . _____ . _____ . _____
Default IP gateway:	_____ . _____ . _____ . _____
Note: The default IP gateway is required only if the Meridian 1 or Succession 1000 system is also connected to the Nortel server subnet (CLAN).	

ACD queue and agents (Overlays 11 and 23)	
ACD DN of CallPilot agents (Overlay 23):	_____
Agent TNs (Overlay 11):	_____
Position ID on Key0:	_____
SCN on Key1:	_____
Default ACD DN for CDN (Overlay 23):	_____

CDN queues (Overlay 23)

Primary CDN (Voice Messaging): _____

Secondary CDN (Multimedia
Messaging): _____**Phantom DNs, if used instead of dummy ACD DNs (Overlays 10 and 97)**

CallPilot application name: _____

Superloop (Overlay 97): _____

Phantom DN (Overlay 10): _____

DCFW CDN: _____

CallPilot application name: _____

Superloop (Overlay 97): _____

Phantom DN (Overlay 10): _____

**Phantom DNs, if used instead of dummy ACD DNs (Overlays 10 and 97)
(continued)**

DCFW CDN: _____

CallPilot application name: _____

Superloop (Overlay 97): _____

Phantom DN (Overlay 10): _____

DCFW CDN: _____

Dummy ACD DNs, if used instead of phantom DNs (Overlay 23)

CallPilot application name: _____

ACD DN: _____

NCFW CDN: _____

CallPilot application name: _____

ACD DN: _____

NCFW CDN: _____

CallPilot application name: _____

ACD DN: _____

NCFW CDN: _____

SL-100/DMS-100 switch information

Complete this section only if your CallPilot server is connected to an SL-100 or DMS-100 switch.

UCD DN for voice messaging:	_____
UCD DN for multimedia messaging (if purchased):	_____
UCD DN for speech recognition (if purchased):	_____
Channel configuration	
UCD DN:	_____
DN of agent:	_____
Message Desk Number:	_____
Terminal Number:	_____
Login Code:	_____
Logout Code:	_____
Service DN:	_____
Associated application:	_____

SMDI Link	
Port Name (Default: COM 2):	_____
Port Use type (Default: MM Access):	_____
Baud Rate (Recommended default: 9600):	_____
Parity:	_____
Number of Data Bits (Default: 7):	_____
Number of Stop Bits (Default: 1):	_____
Flow Control (Default: None):	_____

Configuration Wizard worksheet

Complete the following worksheet as preparation for configuring the CallPilot server. For more information about the information on this worksheet, and the instructions on how to configure the CallPilot server, refer to “Configuring the server software” in the *<switch_model> and CallPilot Server Configuration* guide for your switch and server.

Worksheet sections

The Configuration Wizard worksheet contains the following sections:

- “CallPilot information,” on page 128
- “Operating system password,” on page 129
- “pcAnywhere password,” on page 129
- “Multimedia allocation,” on page 130
- “Application DN information,” on page 130
- “Languages,” on page 131
- “CallPilot network information,” on page 131
- “Customer LAN access information,” on page 132
- “Meridian 1 or Succession 1000 information,” on page 133
- “T1/SMDI information,” on page 135

CallPilot information

Company name:	_____
Customer name:	_____
Serial number:	Obtain the serial number from the CallPilot keycode label.
Keycode:	Obtain the keycode from the CallPilot keycode label.
Computer name:	_____
Time zone:	_____
Country code (for the server location):	_____
Area code (for the server location):	_____

Operating system password

CallPilot uses strong passwords to increase security on the operating system accounts. Strong passwords are enabled by default. When logging into an account or running the Configuration Wizard for the first time, you must change the password. For more information on strong passwords, see the *CallPilot Fundamentals Guide*.

ATTENTION For security reasons, do not write the passwords in this guide. Photocopy the page to record the new passwords. Store the page in a secure place.

Password type	Current Password	New Password
Administrator	default: Bvw250	
NGenSys	default: Bvw250	
NGenDist	default: Bvw250	
NGenDesign	default: Bvw250	

pcAnywhere password

Password type	New Password
CallPilotDist	

For more information on changing the pcAnywhere password see:

- Step “4 Change the CallPilotDist password for pcAnywhere (note: pcAnywhere is not used with the 201i).” on page 30
- the section “Changing pcAnywhere passwords” in the *<switch_model> and CallPilot Server Configuration* guide for your switch and server

Multimedia allocation

DSP Encoding:	<input type="checkbox"/> A-law (Europe or Caribbean)
	<input type="checkbox"/> Mu-law (North America)

Application DN information

Voice Messaging (Primary CDN):	_____
Multimedia Messaging (Secondary CDN):	_____
Speech Activated Messaging:	_____
Express Voice Messaging:	_____
Voice Item Maintenance:	_____
Enterprise Networking:	_____
AMIS Networking:	_____
Fax Item Maintenance:	_____
Express Fax Messaging:	_____
Paced Speech Activated Messaging:	_____
Custom Commands:	_____
Interactive Voice Response:	_____
AUI CallPilot Menu Interface:	_____
AUI CallPilot Alternative Command Interface:	_____

Languages

Record the languages you need.	
Primary prompt language:	_____
Secondary prompt language:	_____
Other languages:	_____

Automated Speech Recognition languages:	_____

CallPilot network information

Embedded LAN TCP/IP Information (Meridian 1 and Succession 100 only)	
MAC address of ELAN network card on the CallPilot server (tower or rackmount servers only):	_____
CallPilot server ELAN IP address:	_____ . _____ . _____ . _____
Subnet mask:	_____ . _____ . _____ . _____

Customer LAN TCP/IP information	
MAC address of Nortel server subnet (CLAN) network card on the CallPilot server (tower or rackmount servers only):	_____
CallPilot server CLAN IP address:	_____ . _____ . _____ . _____
Subnet mask:	_____ . _____ . _____ . _____
Gateway:	_____ . _____ . _____ . _____

Customer LAN access information

The following information is not requested by the Configuration Wizard. However, you may need it if you are connecting to the CallPilot server with a PC on the Nortel server subnet (NS Subnet), also known as the customer LAN (CLAN).

Obtain the following from the network administrator:	
Network user name:	_____
Domain name:	_____
Password:	_____

Meridian 1 or Succession 1000 information

Complete this section only if your CallPilot server is connected to a Meridian 1 or Succession 1000 system.

Switch information	
Switch IP address:	_____ . _____ . _____ . _____
Switch type:	<input type="checkbox"/> Meridian 1 <input type="checkbox"/> Option 11 or Option 11C Mini <input type="checkbox"/> Succession 1000
Switch customer number:	_____
Symposium Call Center Server	
CLAN IP Address:	_____ . _____ . _____ . _____
Symposium Call Center Server voice application Class ID:	_____
Note: The Symposium Call Center Server server CLAN IP address and voice application class ID are required only if you will be using the Symposium Voice Services Support feature.	
TN information	
Note: Copy the relevant information from the “Switch or system configuration worksheet” on page 121.	
Number of TNs:	_____
Dedicated to:	<input type="checkbox"/> ACCESS ACD queue <input type="checkbox"/> IVR* ACD queue
Note: Check one of these options if this group of TNs is dedicated to the Symposium Voice Services Support feature.	
Start TN:	_____
Start TN Key 0 (Position ID):	_____
Start TN Key 1 (SCN):	_____

TN information (complete this section if another TN group is required)

Note: Copy the relevant information from the “Switch or system configuration worksheet” on page 121.

Number of TNs: _____

Dedicated to: ACCESS ACD queue
 IVR ACD queue

Note: Check one of these options if this group of TNs is dedicated to the Symposium Voice Services Support feature.

Start TN: _____

Start TN Key 0 (Position ID): _____

Start TN Key 1 (SCN): _____

TN information (complete this section if another TN group is required)

Note: Copy the relevant information from the “Switch or system configuration worksheet” on page 121.

Number of TNs: _____

Dedicated to: ACCESS ACD queue
 IVR ACD queue

Note: Check one of these options if this group of TNs is dedicated to the Symposium Voice Services Support feature.

Start TN: _____

Start TN Key 0 (Position ID): _____

Start TN Key 1 (SCN): _____

T1/SMDI information

Complete this section only if your CallPilot server is connected to a T1/SMDI switch or system (DMS-100/SL-100).

Switch information

SMDI Transport Data Settings

Poll Timeout (Default: 10 000 ms): _____

Poll Timeout Threshold (Default: 5): _____

Poll DN (Default: 0): _____

MWI Padding (Default: blank): _____

COM Port Settings

Port Name COM 2

Port Use type (Default: MM Access): _____

Baud Rate (Default: 9600): _____

Parity (Default: Even): _____

Number of Data Bits (Default: 7): _____

Number of Stop Bits (Default: 1): _____

Flow Control (Default: None): _____

T1 Board Properties

Line Interface Type (Default: Ground Start): _____

Frame Format: Only D4 is supported.

Coding Format: Only B8ZS is supported.

(T1) Cable Length (Default: None): _____

Debounce Value (Default: 13): _____

Hook Flash Time (Default: 50): _____

Note: Debounce Value and Hook Flash Time units indicate 10X ms.
 Example: “13” indicates “130 ms.”

Channel Detail Information

UCD group for Voice channels, if Voice channels were purchased

Number of Channels (in this UCD group): _____

Agent DN (starting): _____

Hunt Group DN (UCD DN): _____

Message Desk Number: _____

Message Terminal Number (starting): _____

Login Code: _____

Logout Code: _____

UCD group for Fax channels, if Fax channels were purchased

Number of Channels (in this UCD group):

Agent DN (starting):

Hunt Group DN (UCD DN):

Message Desk Number:

Message Terminal Number (starting):

Login Code:

Logout Code:

UCD group for Speech Recognition channels, if Speech Recognition channels were purchased

Number of Channels (in this UCD group):

Agent DN (starting):

Hunt Group DN (UCD DN):

Message Desk Number:

Message Terminal Number (starting):

Login Code:

Logout Code:
