Glossary of programming headings and settings 67

Customer/Company	Supplier
Address	Customer service representative
	Telephone
Telephone	
Billing number	Installer
System coordinator	Installation date

All defaults (for the PBX template) are shown in bold and underlined text. Copying set programming

You can use <u>COPY</u> to copy programming from one telephone to other set, a range of sets or all the sets. Depending on where the display button is pressed, you will copy either all the programming for a telephone or only the programming found under one of the individual subheadings.

For general set copying, you can choose what part of the programming will be used. The choices are:

- System the system administration programming (system data) of a set
- System + User the system administration programming PLUS the programming for a particular set (user data), with the following exceptions:

System Data which will be copied:

Line access

Line assignment

Answer DNs (unless Answer button DN is same as set being copied to) Line pool access

Prime line designation Number of intercom keys

Restrictions

Line/set restrictions Set restrictions

Set Lock Allow Last Number Redial Allow Saved Number Redial

Allow Link

Capabilities

Call Forward No Answer (DN or Route + number + delay)

Call Forward Busy (DN or Route + number)

Redirect Ring Auxiliary Ringer DND on Busy Hotline

Handsfree Answerback

Handsfree Setting
Direct-dial (which set is reached by the D-Dial digit)

Pickup Group Paging Paging Zone Priority call SLR redirection Receive tones ATA ans timer

Telco Features

Call log set (Logging set) 1 stDisplay

MsgIndicate (for ATA)

System data which will NOT be copied:

Line access

Private line appearances

Capabilities

. Set Name

Telco features

Log space

Passwords

Call log password

CAP assignment

Direct-dial set designation

ExtraDial set designation

Service mode ringing set designation

Prime set designation for a line

Hunt group appearances

User data which will be copied:

Language choice

Ring type Calls log options (Auto logging)

Display contrast

Dialing options (automatic, predial, standard)

User data which will be copied if destination set type is the same as the source set type:

External autodial button assignments Internal autodial button assignments Programmable button assignments

User data which will NOT be copied:

CAP module memory button assignments Ring volume

User speed dial entries

^{*.} Write E if using an external antenna.

 $[\]dagger$. n is the number of the radio. Each radio is identified by a five-digit number, the TCM port number followed by the number of the radio (n).

^{‡.} If using a plug-top power supply, write PT.

Template specific defaults

For the Norstar MICS-XC 4.1 system, the PBX template is the default template. The PBX default values are used throughout the entire Programming Record. The DID template is also available as an option at startup. The following charts show the sections of the Programming Record where the DID template default values differ from the PBX template default values.

For information on defaults for Registration, Radio data, Radios, Cells, and the Registration password, refer to your MICS-XC Norstar-Companion Installer Guide. These settings are used with XC 4.1 systems that use Companion components.

Glossary of programming headings and settings

The dots next to each heading in this glossary, represent the programming hierarchy in the Norstar Modular ICS.

Profile	Select the Profile.
Dialpad	Select the Dialpad layout.
Startup	
• Template	Select the template to assign the default values for the system.
Start DN	Enter the DN of the first telephone. The Start DN must be between 3 and 7 digits in length. The default DN length and default Received number length are also defined by the Start DN. If the first digit of a DN is the same as the Direct-dial digit, the Call Park prefix, or the first digit of a line pool access code, it sets them to None.
Terminals & Sets	This programming section lets you assign settings to each telephone.
Show set:_	Enter the DN of the telephone you want to program.
• Line access	A programming section that allows you to assign lines to individual telephones. You can copy the settings from one telephone to another.
•• Line assignment	Line assignment allows you to determine which lines are assigned to the telephone and how incoming calls on those lines will be handled.
••• Show line:_	Enter the line numbers of the lines to be assigned to the telephone.
•• LinePool access	For each line pool (A to O), select whether a telephone (including the DISA DN and Auto DN) will have access.
••• Line Pool A	Select whether the telephone has access to this line pool. ISDN PRI uses pools PRI-A, PRI-B.
•• Prime line	Select a prime line for the telephone. The prime line is the first line selected automatically for making calls from the telephone. To select a line or line pool as prime line, the line or line pool must have been assigned to the telephone.
•• Intercom keys	Select the number of intercom buttons on a telephone for accessing internal lines and line pools.
•• Answer DNs	Ability to assign answer buttons to a telephone so that it can monitor and answer calls for another telephone. You can assign up to five answer DNs.
••• Show set	Enter the DN of the telephone for which this telephone will have an answer button.
•• OLI#	Enter the ten-digit outgoing line identification number.
•• OLI as calld #	For some ISDN sets (for example, video conference units) this allows the OLI digits to replace the ISDN set's internal DN digits during call setup. (Profile 1 & 4 only.)
Capabilities	A programming section that lets you select the capabilities for each telephone.
•• Fwd no answer	Redirect all incoming calls when this telephone does not answer.
••• Fwd to	Enter the external number or the DN of the Norstar telephone to which you want to redirect all incoming calls.
••• Forward delay	Select the number of rings before an unanswered call is forwarded. The heading appears only if a Forward no answer external number or DN is assigned.
•• Fwd on busy	Redirect all incoming calls when this telephone is busy with another call.
••• Fwd to	Enter the external number or the DN of the Norstar telephone to which you want calls to be redirected when this telephone is busy.
•• DND on Busy	Select whether or not an incoming call rings if the user already is on another call.

•• Handsfree	Select whether Handsfree will be available to a telephone.
•• HF answerback	Select whether a user can automatically answer a voice call without lifting the receiver or pressing the Handsfree/Mute button. It is always turned off for an M7100 telephone.
•• Pickup grp	Select one of nine pickup groups to assign this telephone to. Any user in a pickup group can answer calls to any other telephone in their group using the Call Pickup - group feature (Feature 7 5). Choose "None" to disable the feature for this telephone.
•• Page zone	Select one of three page zones to assign this telephone to. Choose "None" to prevent pages at this telephone.
•• Paging	Select whether paging announcements can be made from this Norstar telephone.
•• D-Dial	Select whether you can call the Direct-dial telephone from this telephone using the Direct-dial digit.
•• Priority call	Select whether to allow this telephone to interrupt calls or to override Do Not Disturb at another Norstar telephone. A priority call (Feature 69) can be refused by the person whose call you are trying to interrupt using Do Not Disturb (Feature 85). A priority call cannot be blocked by a person whose telephone is already in Do Not Disturb.
•• Hotline	Select whether a telephone number will be dialed automatically when a user lifts the receiver or presses Handstree . Choose Intrnl to enter an internal Norstar telephone as the hotline. Choose Extrnl to enter an external telephone as the hotline.
•• Aux. ringer	Select whether an auxiliary ringer (if installed) will ring for incoming calls at this telephone.
•• Allow redirect	Select whether to allow this telephone to redirect its lines.
•• Redirect ring	Select whether a telephone rings briefly when a call on one of its lines is redirected by the Line Redirection feature (Feature 8 4).
•• ATA settings	Analog telephones or other devices which are connected to the ICS using an Analog Terminal Adapter (ATA) may need the additional programming found under this sub-heading.
••• ATA ans timer	Select the number of seconds for the delay between the last digit you dial on a device connected to an analog terminal adapter (ATA) and when the analog device is ready to receive DTMF tone from the far end analog device.
••• ATA use	
••• MsgIndicate	Select the type of message indicator that is used by a telephone connected to the ICS by using an analog terminal adapter (ATA).
Name	A programming section that lets you assign names to telephones up to a maximum of 7 characters.
User prefernces	A programming section that lets you program the user admin features, such as external autodialers, language choice and display contrast, which personalize the operation of the user's set.
•• Model	Allows you to pre-program the model of Norstar set which will use this DN.
•• Button prgrming	Lets you program the buttons with internal and external autodialers and/or programmed feature keys.
•• User speed dial	Section where user speed dialers can be programmed.
•• Call log opt'ns	Select whether the set will log all calls, no calls, or only unanswered calls.
•• Dialing opt'ns	Select standard dial, pre-dial or automatic dial.
• • Language	Choose the display language: English, French or Spanish.

Select a ring type.
Lets you create and assign restriction filters which prevent a user from making certain kinds of calls from a telephone.
Select restrictions for specific set or all sets.
For each line, enter the number (two-digit) of the restriction filter to apply during normal service and each of the schedules.
and each of the schedules.
Select the level of personal programming and customizing that can be performed at a telephone.
Select whether a telephone can use Last Number Redial (Feature 5).
Select whether a telephone can use Saved Number Redial (Feature 6 7).
Select whether a telephone can use Link (Feature 7 1) to access the features of a private branch exchange.
Assign restriction filters to certain lines on each set in your system.
Select the line on this telephone for which the restriction will apply.
For each line, enter the number (two-digit) of the restriction filter to apply during normal service and each of the schedules.
and saun of the seriodolos.
This programming section lets you program the way the Norstar system works with features and services that are based in the public network or other outside source, namely Call Display and an external voice message service.
In this programming section, you can assign CLASS services, such Call Display, in order to identify external, in-coming calls.
Enter the number of the line for which the telephone will show Call Display information.
Select whether the telephone will automatically log Call Display information for calls on the specified external line.
Select whether this telephone will display a message indicator provided to the specified line by an external voice message service.

•• 1stDisplay	Select call information to be displayed first: name of caller, number of caller, or name of line in your Norstar system that the call is on.
•• Called ID	Select if Called ID is to be displayed.
•• Log space	Allocate a number of Call log spaces from a system-wide pool of spaces to the telephone.
••• Log: Pool:	Assign this telephone its log spaces.
Lines	A programming section that lets you assign settings to each trunk and external line.
Show line:_	Enter the line number of the line you want to program.
• Trunk/Line data	The programming section that lets you program settings for physical lines that affect how the line is used by the Norstar system.
•• Trunk type	The trunk type is determined by the cartridge or card installed in the slot.
•• Line type	Select how a line will be used by telephones in the system. Choose Public to be able to assign the line to any telephone. Choose Private to make the line private to a telephone. Enter the DN of the telephone you want to assign the line. Choose Pool to place the line in a line pool (A to O).
•• Dial mode	Select the appropriate dial mode for the line. The dial mode you select here must match the dial mode setting of the line at the central office (the public network). The default is tone. This setting does not appear for target lines.
• • PrimeSet	Enter the DN of a prime telephone as a backup to answer calls on this line.
•• CLID set	Choose one set to automatically receive Call Information about incoming calls for a line.
•• Auto privacy	Select whether a line will be private to the individual on a call, or whether it can be shared by other users while a call is in progress. The Privacy setting can be suspended for individual calls using the privacy feature (Feature 8 3).
•• Trunk mode	Select whether the line operates with disconnect supervision. Auto answer and DISA lines must be supervised. This setting does not appear for target lines.
•• Ans mode	Select whether the line will be answered manually (normal call answering method) or automatically by the system. Auto answer allows remote access to your Norstar system. This setting only appears if Trunk mode is supervised.
•• Ans with DISA	Select whether a line programmed for auto answer will be answered with Direct Inward System Access (DISA) or with system dial tone. This setting only appears if Ans mode is Auto. This setting does not appear for target lines.
•• Link time	Select the duration of a signal (such as recall or flash) required to access a feature through a remote system.
•• Link at CO	Select whether the system applies the restrictions on outgoing calls to the digits dialed after the Link signal (a host signalling option).
• • Aux. ringer	Select whether an auxiliary ringer (if installed) will ring for incoming calls on this specific line.
•• Full AutoHold	Select whether an idle line will be put on hold when another line is selected. This setting does not appear for target lines.
•• LossPkg	Select the appropriate loss/gain and impedance package for analog loop lines only. Select the package based on the terminating switch type (PBX or CO) and the distance from the switch (Short, Medium or Long). This setting only appears if Cd1-KSU is Loop. It does not appear for target lines.
•• Rec'd #	Enter the Received number for this target line. When the system automatically answers an incoming call on auto-answer Loopstart or digital lines, it collects the number of digits specified by the Rec'd # length setting, matches these digits to a Received number, and routes the call to the appropriate target line. A Received number cannot be the same as, or be the start digits of a line pool access code, a destination code, the DISA DN, or the Auto DN.
· · · · · · · · · · · · · · · · · · ·	

•• Signal •• ANI number	Select the signal type for an E&M or DID line to match the signal type programmed for the trunk at the other switch.
●● ANI number	Solart whether the telephone number of the college will be called a few this EO M as DID I'm. The
	Select whether the telephone number of the caller will be collected for this E&M or DID line. The digits can then be displayed on Norstar telephones as part of Call Information services.
• • DNIS number	Select whether the digits dialed by an external caller on this E&M or DID line will be collected.
•• Gain	Select the appropriate gain level for this E&M or DID line.
• Name	Enter a name for a line that is up to seven characters long. This name defaults to the line number.
• Restrictions	Lets you create and assign restriction filters which prevent a user from making certain kinds of calls using a line.
•• Restrn filters	These are sets or groups of restrictions and associated overrides that specify the external numbers or feature codes that cannot be dialed from a telephone or line.
••• Show filter:_	Enter the two-digit filter number.
•••• Restrn flt 00	Filter 00 is pre-set with no restrictions.
•••• Restrn flt 01	First programmable restriction. For each filter, enter up to 99 restrictions.
•••• Deny	Enter the digits you wish to be restricted when this filter is used.
•••• Override 001	Enter the dialing sequences which are allowed to override this filter, if any.
• • Line restrns	Designate restriction filters to the lines assigned to this telephone.
••• Normal	For each line, enter the number (two-digit) of the restriction filter to apply during normal service and each of the schedules.
••• Night	and each of the schedules.
••• Evening	
••• Lunch	
••• Sched 4	
••• Sched 5	
••• Sched 6	
• • Remote restrns	In this section, you can assign restriction filters that apply only to remote users of the line.
•••• Normal	For each line assigned to this telephone, enter the number (two-digit) of the restriction filter to
•••• Night	apply to remote use during each of the schedules.
•••• Evening	
•••• Lunch	
•••• Sched 4	
•••• Sched 5	
•••• Sched 6	
• Telco features	This programming section lets you assign settings for an external voice message service.
	Assign a VMsg center to be used for voice message service for the line.

Services	A programming section that lets you create services such as night ringing, routing and restrictions for making external calls.
Ringing service	Assign additional telephones to ring for a line during specified periods of the day or night.
•• Ringing groups	Allow groups of extended ringing sets to be defined.
••• Show group:_	Enter the number of the Ringing group you want to program (001-100).
•••• Ring grp 001	Enter the valid ring group number from 001 to 100. All ring groups have set 211 assigned to them.
••••• Show set:_	Enter the number of the set you wish to assign to this Ringing group or use <u>LIST</u> to display the valid sets added to this Ringing group.
•• Sched:Night	In this setting, you select options for your ringing service.
••• Service	Select how you want your service activated.
••• ExtraDial	Enter the internal telephone number of the Extra-Dial telephone. This allows you to assign an additional Direct-dial telephone in the Norstar system for each schedule you use.
••• Line settings	Select ringing service options for each line.
•••• Show line:_	Enter the valid line number.
••••• Ring grp	Press change to enter the line number of each pre-defined ring group between 001 and 100.
••••• Aux. ringer	Indicate whether the auxiliary ringer (if installed) also rings for this line when Ringing service is on.
•• Sched:Evening	Enter the information for each of these settings as you have done for Night sched.
•• Sched:Lunch	
•• Sched:Sched 4	
•• Sched:Sched 5	
•• Sched:Sched 6	
Restrn service	Programming section where you can select the method for activating alternate restrictions.
•• Sched:Night	In this section you can indicate how alternate call routing should be activated for each of the schedules.
••• Service	Select how you want your service activated.
•• Sched:Evening	Set up activation method for each of these settings, as you have with Night sched.
• • Sched:Lunch	
•• Sched:Sched 4	
•• Sched:Sched 5	
•• Sched:Sched 6	
Routing service	A programming section that lets you create up to 500 destination codes and 999 routes to provide a dialing plan or for "least cost routing".
•• Routes	Create the routes to be used when a destination code is dialed.
••• Show route:_	Enter the number of the route you want to create.
•••• DialOut	Enter the number (up to 24 digits or characters) you want this route to dial out (if required).
	I .

•••• Use	Select the line pool you want this route to use.
•• Dest codes	Define which routes are used when a destination code is dialed.
••• Show DstCode:_	Up to 500 destination codes are programmable. Enter the digits (up to 7 digits) of the destination code that you want to define a route. No two destination codes can be identical. A destination code cannot begin with a digit assigned as the Call Park prefix, or a Direct-dial digit. It cannot be the same as, or be the start digits of a DN, the DISA DN or the Auto DN, a line pool code, or a received number.
••• DestCode:_	Enter the new destination code.
••• DestCode:	Shows the destination code you wish to view.
•••• Normal	For the last destination code, define the normal service. Use the route that has the lowest cost for the times when normal service is in use.
•••• Digit absorb	Enter the number of digits from the destination code that will not be dialed as part of the outgoing number.
•••• Night	For the last destination code, define a route for each of the schedules, as you have done for normal service.
•••• Evening	Horman service.
•••• Lunch	
•••• Sched 4	
•••• Sched 5	
•••• Sched 6	
•• Sched:Night	This schedule can be activated automatically or manually, or it can be left in the default Off.
••• Service	Select how you want this service activated, if applicable.
••• Overflow	For each schedule, choose whether you want a destination code to use the route assigned to normal service when the route assigned to the schedule is busy.
•• Sched:Evening •• Sched:Lunch	Select how you want each of the scheduled services to be activated, and whether a destination code uses the route used with normal service when the route used with the schedule is busy.
•• Sched:Sched 4	
•• Sched:Sched 5	
•• Sched:Sched 6	
Common settings	In this programming section, you can assign settings that are shared by different services.
•• Control sets	Assign control telephones to turn services on or off.
••• For lines	Select lines for settings and services.
•••• Show line:_	Enter the number of the line you want to program.
•••• L001	Assign a control telephone to each external line. This telephone controls services for the line.
••• For sets	Select the sets affected by this service.
•••• Show set:_	Enter the number of the telephone you want to program.

•••• <internal #=""></internal>	Assign a control telephone to each telephone. This telephone controls Restriction service and Routing service for the set.
•• Schedule names	The schedule name is shown on the display of the control telephone when the schedule is turned on. It identifies the active schedule.
••• Sched 1	Enter the name of the schedule, or use the default numbering.
••• Sched 2	
••• Sched 3	
••• Sched 4	
••• Sched 5	
••• Sched 6	
•• Schedule times	Enter automatic start and stop times for scheduled services.
••• Monday	Assign the schedule times for Monday, as it applies to your office.
•••• Sched:Night	Select the schedule as it applies to your office.
•••• Start time	Enter the start time.
•••• Stop time	Enter the stop time.
••• Tuesday	Assign scheduled start and stop times for each scheduled service and day of week, as you have
••• Wednesday	done for Monday.
••• Thursday	
••• Friday	
••• Saturday	
••• Sunday	
Sys speed dial	A programming section that lets you create speed dial codes that can be used by any telephone in the system.
• Speed dial #	Enter the two-digit speed dial code (01-70) that you want to program.
•• 01:	Enter the telephone number (up to 24 digits) that you want to assign to it.
•• Use prime line	Select the line to use for dialing this speed dial number. If you select Use routing table, the number dialed is treated as a destination code and is routed according to the routing tables.
•• Display digits	Select whether a telephone displays the number dialed when a speed dial number is used.
•• Name	Enter a name (up to 16 characters) for a speed dial number. When the number is dialed, the telephone displays the name, not the number. This heading only appears if Display digits is N.
•• Bypass restr'n	Select whether a programmed system speed dial number can bypass restrictions programmed for a line and/or a telephone.
Passwords	A programming section that lets you assign passwords to restrict access to programming and system features.
COS pswds	Create up to 100 six-digit passwords that control access and use of the Norstar system by internal and remote users.
•• Show pswd#:_	Enter the two-digit Class of Service password number (00-99).
	•

•• COS pswd #00	Indicates the number of the password to which you are assigning information.
••• Pswd 00	Enter a six-digit password.
••• User flt	Assign a restriction filter to the Class of Service password.
••• Line flt	Select whether a Class of Service password will use the default line filter or a different line filter (enter the two-digit filter number).
••• Remote pkg	Select whether a Class of Service password will use the default remote package or a different remote package (enter the two-digit remote package number).
Call log pswds	A programming section that allows you to clear any Call Log password programmed with the Call Log feature.
•• Show set:_	Enter the DN of the telephone you want to program.
••• Log pswd	Erase the call log password for this telephone.
Programing pswds	In this section you can create your own password rather than use the default.
•• Installer	Enter the new installer password which gives you access all the programming settings.
•• SysCoord+	Enter the new system coordinator password which gives you access to selected programming settings.
•• Sys coord	Enter the new system coordinator password which gives you access to everyday programming settings.
●● Basic	Enter the new basic password which gives you access to the most commonly used programming settings.
• Reg pswd.	Enter the new registration password which lets you register portable telephones to the system.
Hospitality	A programming section that allows to create Hospitality services passwords if required, rather than use the defaults.
•• Desk pswd	Enter the new Desk password which gives access to all Hospitality services programming settings.
•• Cond pswd	Enter a Condition password which gives certain employees access to the Room condition programming settings in Hospitality services.
Time&Date	A programming section that lets you set the system's clock to the correct time and date.
System prgrming	A programming section that lets you change system-wide settings.
Hunt groups	A programming section that lets you set up incoming calls on a specific DN to be routed to a group of sets.
•• Show group:_	Enter the DN of the telephone you want to program.
••• Member DNs	Enter the DN of the telephone you want to add to the group.
•• Line assignment	Allows you to assign or unassign a line to a particular hunt group.
•• Mode:	Allows you to determine how an incoming call will be handled by the hunt group.
•• Hunt delay:	Select a delay value to determine how long a set rings before the call moves on the next member set.
•• If busy:	Allows you to determine how an incoming call is to be treated when all hunt group member sets are busy.
•• Q Timeout:	Allows you to set the number of seconds the incoming call remains in the hunt group call queue before it is offered to the overflow position.
• • Overflow:	Enter the DN of the set you want the hunt group overflow calls to be presented.
	1

Enter the name of the hunt group.
Change the DN of a telephone. All DNs must be the same length. The first digit of a new DN cannot be the same as the external line access code, the Call Park prefix, the Direct-dial digit, or the first digit of a line pool access code. If you change an individual DN, you must quit programming for the change to take effect. If you have additional programming to do, quit and then begin a new programming session.
These settings can be changed or activated to suit specific telephones.
Select whether users can listen to music through their telephone speaker using the Background Music feature (Feature 8 6). A music source must be connected to the ICS.
Select whether a caller on hold hears music (from a source such as a radio connected to the ICS), periodic tones, or silence.
Select whether the volume of a telephone receiver/headset automatically resets to the system default level, or retains the level set at the telephone.
Select the number of seconds a call can remain camped before it returns to the telephone that camped it.
Select the number of seconds a call on an external line can remain parked before it returns to the telephone that parked it.
Select whether the system will use Call Park codes in a sequence from lowest to highest, or use the lowest numbered code that is available when the call is parked.
Select the number of times a transferred call rings before it returns to the telephone that transferred it.
Select whether to automatically transfer unanswered external calls to a prime telephone.
Select the number of times a call rings before Delayed Ring Transfer transfers it to a prime telephone. This setting only appears if DRT to prime is Yes.
Select whether the telephone reminds you when a call is on hold.
Select the number of seconds before the telephone reminds you that a call is on hold. The setting only appears if Held reminder is Yes.
Select whether users can answer calls at any telephone using the directed call pickup feature (Feature 76).
Select whether users can hear a Page Announcement tone (Feature 6 0) over the system.
Select the number of seconds before a Page is automatically disconnected.
Select whether daylight savings time is automatically applied to the system clock.
Customize how Call log space is allocated to telephones in the system.
This programming step confirms that you want to reallocate the Call log space equally to all telephones in your system.
Select the Call log space that will be given to all telephones in the system.
Select the delay, in milliseconds, between the selection of an outgoing line and the moment that Norstar sends dialed digits or codes on that line.
Enter the DN of the telephone used to display alarm messages when a problem occurs in the Norstar system.
Select whether telephones in the system can be moved without losing their programming.
Select whether to provide light message waiting lamps or a stuttered dialtone on selected analog telephones on specially equipped ASMs.

•• Anskey:	Allows you to assign up to eight answer keys. Settings are Basic, Enhanced, and Extended.
• Direct-dial	Select whether an internal or external number is used for the Direct-dial telephone.
•• D-Dial 1	Enter the internal or external numbers that the system will automatically dial when someone enters the Direct-dial digit.
••• Intrnl#	Enter the DN number of the direct-dial telephone. If it is an external number, you will also have to choose how the outgoing call is made.
•• D-Dial 2	Program the settings for each direct-dial telephone, as you did for Set 1.
•• D-Dial 3	
•• D-Dial 4	
•• D-Dial 5	
CAP assignment	The DN of the telephones to be assigned as the central answering position (CAP). The CAP must be a M7234 telephone.
•• CAP 1	Enter the DN of the CAP telephones.
•• CAP 2	
•• CAP 3	
•• CAP 4	
•• CAP 5	
Access Codes	In this section, you can enter the access codes for Line pool, Park prefix, Extrnl code, Direct-Dial, Auto DN, and DISA DN.
•• Line pool codes	Enter a line pool access code for each line pool. A code can be one to four digits in length. A line pool access code cannot start with the same digits as the Call Park prefix or the Direct-dial digit, any DN (including Rec'd #s, the DISA DN, or the Auto DN), or a destination code.
•• Park prefix	Select the first digit of the Call Park retrieval code.
•• Extrnl code	Enter the one-digit external line access code. This code allows an M7100 telephone or a device connected to an ATA to access external lines. The external line access code cannot be the same as the Call Park prefix, the Direct-dial digit, or the first digit used by an internal DN.
•• Direct-dial	Select the digit used to dial a Direct-dial telephone. The digit cannot be the same as the first digit of a DN, of a line pool access code, the external line access code or the Call Park prefix. It cannot be the first digit of a destination code.
•• Auto DN	Enter the DN that a remote user can dial on an auto answer Loop line so that the line is answered with system dial tone. A remote user can then use the system resources allowed by the remote access package assigned to the line. The length of the Auto DN is the same as the Rec'd # length. The Auto DN cannot be the same as a line pool access code or a destination code.
•• DISA DN	Enter the DN that a remote user can dial on an auto answer Loop line so that the line is answered with stuttered dial tone. A remote user must then enter a Class of Service password to gain access to system resources. The remote access package assigned to the Class of Service password determines which resources they can use. The length of the DISA DN is the same as the Rec'd # length. The DISA DN cannot be the same as a line pool access code or a destination code.
Remote access	In this programming section, you can create a system of controlled access to your Norstar system.

•• Remote access pkgs	Create packages to apply to lines that allow or restrict the remote access to Norstar line pools and/or to paging.
••• Show pkg:_	Enter the two-digit remote package number (00-15). Package 00 is pre-set to allow no access.
•••• LinePool access	For each package, select whether the user will have access to your system's line pools.
••••• Pool <pool (pool="" code)="" letter=""></pool>	For each line pool, select whether a remote user can have access.
•••• Remote page	For each package, select whether a remote user can access the Page feature.
•• Rem line access	Select the remote access packages to be applied.
••• Show line:_	Enter the line number.
Change DN type	A range of DNs is available to either portable telephones or ISDN terminal equipment.
•• Show DN:_	Enter the DN for which you want to change the DN type.
••• 637	Select whether this DN is reserved for use with a portable telephone or with ISDN terminal equipment.
Companion	This section allows you to set up Base Stations and program the portables in your Companion system.
Registration	This section allows you to register the portables to the system.
•• Registration	The ability to turn portable registration on or off.
•• Portable DNs	Identifies the access line to which a portable is registered.
••• Show DN:_	Shows the DN of the portable.
• Radio data	In this programming section you can initiate a re-evaluation
•• Re-evaluation	A process which automatically assigns Base Stations to cells and defines the cell configuration.
••• Status	Indicates the status of the Re-evaluation.
• Radios	Provides information on cell assignment and antenna type.
•• Cell assignment	View whether a radio is assigned to a cell or unassigned.
••• Show radio	Enter the number of the radio.
•• Antenna type	Indicates the type of antenna selected for each Base Station.
••• Show radio	Enter the number of the radio.
• Cells	Provides information on cells within the system.
•• Show cell:_	Enter the number of the cell you wish to program.
•• Cell radios	Assign a radio to this cell.
••• Show radio:_	Enter the number of the radio.
•• Cell nghbrs	Assign a cell to be a neighbor (a cell that physically adjoins another cell) to this cell.
••• Show nghbr	Allows you to view cell nghbr information.
•• Cell rad nghbrs	Assign a cell to be a bordering cell to each cell neighbour.
•• Show RadNghbr	Allows you to view cell rad nghbr information.
System LID	The System Access Logical Identifier (LID) by which the system identifies itself to portable telephones and which the portable telephones use to request service from the system.

• Rec'd # length	Select the number of digits received on auto-answer lines. These digits are used to identify the Auto DN and DISA DNs, and to route calls to target lines.
DN length:_	Select the length of DNs. DN length can be three to seven digits. Each increase in DN length adds the digit "2" to an existing DN (for example: DN 344, increased to five digits becomes 22344).
Nat'nl length	The length of the telephone number dialed to reach a person within the same country.
Make/Break:	Select the Make/Break ratio. The default Make/Break ratio is 40 / 60.
BusName:_	Allows you to specify the name of your company. The name is shown on the telephone display.
CbC limits	The Call by Call limits section lets you program the minimum and maximum incoming calls and the maximum and minimum outgoing calls for the selected PRI line pool.
• • Pool PRI-A	Select the PRI line pool (PRI-A, PRI-B) for which you wish to set the limits.
••• Show: Public	Select Public or Private
•••• Min incoming	Enter the minimum number of incoming PRI lines you desire.
•••• Max incoming	Enter the maximum number of incoming PRI lines you desire.
•••• Min outgoing	Enter the minimum number of outgoing PRI lines you desire.
•••• Max outgoing	Enter the maximum number of outgoing PRI lines you desire.
Release reasons	Release reasons.
Hospitality	Hospitality services programming.
•• Room/desk information	Setting that allows the installer to assign sets to a room.
••• Show set:_	Indicate the set you wish to configure.
••• Room #:_	Indicate the room associated with the set.
••• Adm pwd req'd:	Indicate whether the set requires the use of the Hospitality Desk Admin password to access Hospitality Desk features.
• • Call Restrns	Setting that allows the installer to assign dialing filters to room occupancy states.
••• Vacant	Setting that indicates the Room is empty.
•••• Use flt:	Enter the dialing filter for the room state. The filters range from 00 to 99.
••• Basic	Indicates the filter to be assigned for that level of room occupancy.
••• Mid	Indicates the filter to be assigned for that level of room occupancy.
••• Full	Indicates the filter to be assigned for that level of room occupancy.
•• Service time	Setting that allows for the installer or system coordinator to program a system-wide time when occupied rooms change state from Service done to Needs service.
••• Hour	Enter the hour.
••• Minutes	Enter the minutes.
•• Alarm	Setting that allows the installer to configure the Alarm operation.
••• Attn attempts:	Number of times the Alarm time feature attempts to get the attention of the occupant before cancelling.
••• Retry intrvl	The interval period in minutes, between each Alarm attempt.
••• Time format	Choose if alarm times are entered using a 12 hour or 24 hour clock.
	<u>.</u>

	••• Answer timer	

•• CO fail	Select the carrier failure standard used by your T1 service provider. This setting only appears for DTIs.
•• I/F levels	Interface levels defaults to the ISDN loss plan setting. Find out if your Norstar system is connected to a central office (CO) with digital network loss treatment (ISDN I/F levels) or analog network loss treatment (PSTN I/F levels) by checking with your telecommunications service provider.
•• Framing	Framing lets you select the framing format used by your T1 service provider. This setting only appears for DTIs.
•• Internal CSU	Internal CSU allows you to turn the internal T1 channel service unit on or off. The channel service unit gathers performance statistics for your T1 lines.
•• CSU line bld	CSU line build allows you to set the gain level of the transmitted signal. This setting only appears for DTIs that have their internal CSU turned on.
•• DSX1 bld	DSX1 build out allows you to set the distance between the ICS and an external channel service unit. This setting only appears for DTIs that have their internal CSU set to Off.
•• Line coding	Select the standard used by your T1 service provider for encoding signals on the T1 lines.
•• ClockSrc	Determine the type of clock source.
••• Loops	View the loops on a BRI Card.
••• Loop nnn	View the settings for a particular loop on a BRI Card.
•••• Type	View or change the loop type.
•••• Sampling	Select the sampling used by an S-loop.
•••• DNs on Loop	Assign the ISDN DNs that use this loop.
•••• Assign DNs	Enter ISDN DNs for each S-loop or LT -loop.
••••• Show DN:_	Indicates whether or not the DN is assigned to a loop.
••••• Loop DN:_	Select the main ISDN DN, if any, for the loop.
••• SPID1	Enter the SPID supplied by your service provider.
••• # of B-channls	Select the number of B-channels that are associated with the SPID.
••• Network DNs	Enter the Network DNs that are associated with the SPID. A Network ISDN DN can be assigned to more than one SPID.
•••• Call type	Select the Call type used with the Network DN. For each ISDN DN, use only one of each of the Voice and Data call type settings, or a single Both call type setting.
••• D-packet servce	Configure the D-packet service for this loop. Only one loop on each card can support D-channel packet service.
•••• D-packet servce	Turn the D-packet service for this loop on or off.
•••• Lp001	Select the S-loop (for BRI-ST Card) or LT-loop (for BRI-U2 or BRI-U4 Card) that supports the D-packet service.
••• TEIs	Add up to eight Terminal Endpoint Identifiers (TEIs). Each TEI is supplied by your service provider and is associated with an ISDN device.
•••• TEI	Enter the two-digit TEIs supplied by your service provider.
••• ClockSrc	Determine the type of clock source.
••• ONN blk	Determine the ONN blocking for BRI loops.
••• SPID2	Enter the second SPID supplied by your service provider, if applicable.

• Cd2 on KSU	Select the type of card that occupies the second slot in the ICS (The slots are numbered from left to right). If your system is using 4x8 software which has not been upgraded, this setting does not appear.
•• Mod 03	View and program the cards installed in the modules.
•• Mod 04	
•• Mod 05	
•• Mod 06	
•• Mod 07	
•• Mod 08	
•• Mod 09	
•• Mod 10	
•• Mod 11	
•• Mod 12	
•• Mod 13	
•• Mod 14	
••• StnMod	Station Module
••• ASM	Analog Station Module
••• TrunkMod	Trunk Module
••• DataMod	Norstar Integrated Data Module 200 (IDM 200), BayStack or Synchronous Data Interface (SDI)
•••• Туре	Shows type of data module. You can change the type if no data module is currently attached to the expansion port.
•••• IP address	Shows you the IP address for a data module (BayStack only).
•••• Fixed access	Allows you to assign Fixed lines to supported data modules (IDM 200, BayStack or SDI).
•••• Switched access	Allows you to assign lines used for dial-up network access to the data module (BayStack only).
••••• Line assignment	Allows you to select Fixed lines the data module (BayStack only) uses for switched access.
••••• Line pool access	Allows you to give the data module (BayStack only) line pools access to support switched access.
•••• DataMod NVRAM	Lets you reset the NVRAM of the IDM 200 data module to the factory defaults.
•••• Config	Lets you configure the settings for the SDI.
•••• Ptl	Select the physical interface used to connect the SDI to the data networking equipment.
•••• DSO rate	Select the transmission rate of the channels (Fixed lines) assigned to the SDI.
••••• TxClk src	Select whether data travelling through the SDI is synchronized using timing (clocking) from the SDI or the DTE.
••••• TxClk invrsn	Invert the signal used by the SDI to synchronize data from the DTE to adjust for round trip delays between the SDI and DTE.
••••• Data invrsn	Inverts data travelling through the SDI before routing it to the T1 connection or DTE to allow the SDI to support HDLC/SDLC (a transmission standard for data) protocol.

•••• Lp state	Shows you the direction of the loopback, if any, generated by the SDI.
•••• Fixed access	Allows you to assign Fixed lines to supported data modules (IDM 200, BayStack or SDI).
Maintenance	This programming section lets you make diagnostic checks on the system.
System version	Record the system version shown on the display after entering the maintenance section.
Port/DN status	View the Port/DN status.
Module status	View the Module status.
Sys test log	View a list of audits, event messages, and alarm codes.
Sys admin log	View a list of administrative events performed on Norstar.
Network evt log	View the items in the Network Log, which keeps a record of diagnostic test results, audits, event messages, and alarm codes that relate to the digital network interface.
Provisioning	Place BRI loops in or out of service.
• Tests	Run and list any BERT-set tests.
• CSU stats	View the performance statistics for your T1 lines.
Diagnostic tools	Diagnostic tools programming performed by experienced personnel.
Usage metrics	This section allows you to gather statistical information on Hunt group usage.
